|                                                                                                 |    |
|-------------------------------------------------------------------------------------------------|----|
| <b>Basic statistics of Israel, 2014</b> .....                                                   | 7  |
| <b>Glossary</b> .....                                                                           | 8  |
| <b>Executive summary</b> .....                                                                  | 9  |
| The economy has strong fundamentals, but productivity performance has been weak .....           | 10 |
| Income inequality and poverty are high .....                                                    | 10 |
| The fiscal framework is not conducive to inclusive growth .....                                 | 10 |
| Main findings and key recommendations .....                                                     | 11 |
| <b>Assessment and recommendations</b> .....                                                     | 13 |
| The economy is resilient and has sound fundamentals .....                                       | 14 |
| Maintaining an expansionary monetary stance and public debt reduction remains appropriate ..... | 21 |
| Productivity-enhancing reforms to boost growth and make it more inclusive . . .                 | 27 |
| Well-designed reforms to promote social cohesion and share the fruits of growth                 | 39 |
| Strengthening climate change policy .....                                                       | 46 |
| Bibliography .....                                                                              | 47 |
| <b>Annex A.1. Progress in structural reform</b> .....                                           | 51 |
| <b>Annex A.2. Quantification of the impact of product market reforms in Israel</b> .....        | 57 |
| Bibliography .....                                                                              | 59 |

### Thematic chapters

|                                                                                                         |     |
|---------------------------------------------------------------------------------------------------------|-----|
| <b>Chapter 1. Boosting competition on Israeli markets</b> .....                                         | 61  |
| Product market shortcomings hurt growth .....                                                           | 62  |
| Room for progress on competition laws and their application .....                                       | 67  |
| Making state intervention more effective .....                                                          | 73  |
| Lowering import barriers would boost competition from abroad .....                                      | 78  |
| Strengthening competition in the food sector .....                                                      | 81  |
| The economy would also benefit from greater competition in banking .....                                | 86  |
| Network industries can be made to work better .....                                                     | 90  |
| Recommendations for improving competition in the economy .....                                          | 100 |
| Bibliography .....                                                                                      | 102 |
| <b>Chapter 2. Improving the pension system and the welfare of retirees in Israel</b> .....              | 107 |
| To meet the challenge of an ageing population, Israel has embarked on significant pension reforms ..... | 108 |

|                                                                            |     |
|----------------------------------------------------------------------------|-----|
| State involvement in pension financing is relatively limited . . . . .     | 119 |
| The decline in poverty among the elderly has so far been limited . . . . . | 125 |
| Improving pension adequacy . . . . .                                       | 134 |
| <i>Recommendations for improving the pension system</i> . . . . .          | 141 |
| Bibliography . . . . .                                                     | 142 |

#### Boxes

|                                                                                                                                         |     |
|-----------------------------------------------------------------------------------------------------------------------------------------|-----|
| 1.1. Israel's main competition bodies . . . . .                                                                                         | 69  |
| 1.2. The organisation of the payment card market has encouraged rent-seeking by the financial institutions . . . . .                    | 89  |
| 2.1. First-pillar allowances and funding . . . . .                                                                                      | 112 |
| 2.2. Adjustments to old public and private pension funds . . . . .                                                                      | 115 |
| 2.3. Improving the governance of "budgetary pensions" and the transparency of the government's contingent pension liabilities . . . . . | 123 |

#### Tables

|                                                                                           |     |
|-------------------------------------------------------------------------------------------|-----|
| 1. Macroeconomic indicators and projections . . . . .                                     | 17  |
| 2. Possible shocks to the Israeli economy . . . . .                                       | 18  |
| 3. Gross and net pension replacement rates . . . . .                                      | 43  |
| 4. Total pension-related public spending . . . . .                                        | 45  |
| 2.1. Gross and net pension replacement rates . . . . .                                    | 114 |
| 2.2. Main characteristics of the different types of second pillar pension plans . . . . . | 116 |
| 2.3. Total pension-related public spending . . . . .                                      | 120 |

#### Figures

|                                                                                                             |    |
|-------------------------------------------------------------------------------------------------------------|----|
| 1. Macroeconomic performance has been solid . . . . .                                                       | 15 |
| 2. Effective exchange rates and export performance . . . . .                                                | 16 |
| 3. Better Life Index (BLI) reflects the great diversity of the Israeli population . . . . .                 | 19 |
| 4. Monetary policy indicators . . . . .                                                                     | 22 |
| 5. Financial indicators, 2014 . . . . .                                                                     | 23 |
| 6. Household debt is low, and the risk profile of new mortgages has been reduced . . . . .                  | 24 |
| 7. The general government accounts have strengthened . . . . .                                              | 25 |
| 8. Revised medium-term fiscal targets . . . . .                                                             | 26 |
| 9. Cutting public expenditures has led to inadequate spending in some key sectors . . . . .                 | 28 |
| 10. Productivity gap and TFP . . . . .                                                                      | 29 |
| 11. Trade openness is relatively low and product market regulation stringent . . . . .                      | 29 |
| 12. The productivity gap between the exposed and sheltered sectors is large and price levels high . . . . . | 31 |
| 13. Tariff and non-tariff trade barriers are high . . . . .                                                 | 32 |
| 14. Regulation in retail trade is restrictive . . . . .                                                     | 33 |
| 15. The banking sector has an oligopolistic market structure . . . . .                                      | 34 |
| 16. The economic benefits of boosting average education are potentially large . . . . .                     | 37 |
| 17. Resources and outcomes in education have increased, but further progress is needed . . . . .            | 38 |
| 18. The employment rate has increased, but wage growth has been quite sluggish . . . . .                    | 40 |
| 19. Supply conditions in the housing market have improved somewhat . . . . .                                | 41 |
| 20. The ageing process and public pension costs are quite moderate . . . . .                                | 43 |
| 21. The employment rate of seniors has risen strongly, but their poverty rate remains high . . . . .        | 44 |

|                                                                                                   |     |
|---------------------------------------------------------------------------------------------------|-----|
| 22. GHG emissions have risen less than GDP.....                                                   | 46  |
| 1.1. Foreign trade indicators .....                                                               | 63  |
| 1.2. Product market regulation .....                                                              | 64  |
| 1.3. Employment by enterprise size class .....                                                    | 65  |
| 1.4. Per capita GDP and productivity .....                                                        | 66  |
| 1.5. TFP, productivity gap and sectoral trade share .....                                         | 66  |
| 1.6. Comparative price levels.....                                                                | 68  |
| 1.7. The competition regulatory framework and its enforcement .....                               | 69  |
| 1.8. Number of mergers filed.....                                                                 | 70  |
| 1.9. Restrictiveness of regulation of state-owned enterprises .....                               | 74  |
| 1.10. Size of government procurement .....                                                        | 75  |
| 1.11. Burdens on the economy due to environmental policies and their perceived stringency .....   | 77  |
| 1.12. Non-tariff barriers to trade and investment .....                                           | 78  |
| 1.13. Services trade restrictiveness index .....                                                  | 79  |
| 1.14. Tariffs on dairy products.....                                                              | 82  |
| 1.15. Main characteristics of agricultural support .....                                          | 83  |
| 1.16. Ten most concentrated countries for grocery retailing within OECD.....                      | 84  |
| 1.17. Regulation in retail trade .....                                                            | 85  |
| 1.18. Banking sector: efficiency, profitability and diffusion of Internet banking. ....           | 87  |
| 1.19. Structure and concentration in the banking sector .....                                     | 88  |
| 1.20. Product market indicators in postal services, telecom, ports and air transport              | 92  |
| 1.21. Indicators of railway transport regulation .....                                            | 95  |
| 1.22. Electricity sector indicators .....                                                         | 96  |
| 1.23. Natural gas price .....                                                                     | 99  |
| 2.1. Demographic indicators .....                                                                 | 109 |
| 2.2. Old-age dependency .....                                                                     | 110 |
| 2.3. Demographic developments: composition by community .....                                     | 111 |
| 2.4. First-pillar pensions.....                                                                   | 113 |
| 2.5. Second pillar of the pension system.....                                                     | 117 |
| 2.6. Assets in the second pension pillar.....                                                     | 118 |
| 2.7. Total assets cumulated in personal pension plans .....                                       | 119 |
| 2.8. Public pension costs .....                                                                   | 120 |
| 2.9. Long-term projections of first-pillar pension spending .....                                 | 121 |
| 2.10. Employment rate projections.....                                                            | 122 |
| 2.11. Budgetary pensions .....                                                                    | 122 |
| 2.12. Direct public spending on old-age and survivors' pensions .....                             | 125 |
| 2.13. Composition of budgetary pensions .....                                                     | 125 |
| 2.14. Mean income of those over 65 .....                                                          | 126 |
| 2.15. Employment and disposable income developments among those over 65. ....                     | 127 |
| 2.16. Income sources of the elderly population .....                                              | 128 |
| 2.17. Average income gap between elderly Arabs and non-Arabs .....                                | 129 |
| 2.18. Relative poverty rates .....                                                                | 129 |
| 2.19. Poverty rate of the elderly population.....                                                 | 130 |
| 2.20. Inequality among the elderly.....                                                           | 131 |
| 2.21. Basic monthly old-age pension and income supplement compared to the poverty threshold ..... | 131 |

|                                                                                                   |     |
