Skills in the Netherlands.....	88
Developing skills at school.....	91
Using skills more effectively at work.....	98
Acquiring skills through work.....	104
Recommendations to boost skills for all.....	114
Bibliography.....	114
Boxes	
1. Assessing potential macro-financial vulnerabilities.....	21
2. Possible shocks to the Dutch economy.....	22
3. Recent refugee surge and its economic impacts.....	24
1.1. A wide range of public support programmes help companies obtain financing..	77

Tables

1. Macroeconomic indicators and projections	19
1.1. A wide range of market-based financing complements bank lending for SMEs . .	79

Figures

1. Growth has picked up	14
2. Social indicators are relatively good overall.	15
3. Labour productivity is flat.	16
4. Confidence and the housing market have recovered	17
5. Trade surplus is sizeable and rising.	17
6. Net saving position of sectors has been rising or remained high.	18
7. Labour market is recovering.	18
8. Potential macro-financial vulnerabilities are low and have diminished significantly since 2007	21
9. Vulnerability indicators and economic growth	22
10. Sizeable fiscal consolidation and the economic recovery have improved public finances	23
11. Asylum requests surged in 2015	24
12. Simulations point to further reduction in public debt	27
13. Self-employment is affecting employment and incomes	28
14. Tax and benefit system favours self-employed over employees, raising self-employment.	28
15. Investment developments have been uneven	30
16. Gap between non-residential investment needs and actual investment is substantial.	30
17. Support for business R&D is skewed towards tax incentives	32
18. Bank lending constraints for small and medium-sized enterprises (SMEs) remain high.	34
19. Small bank loans are relatively expensive	35
20. Literacy skills of immigrants, less educated and the old lag behind other groups and peers	36
21. Changing demand for skills has led to a polarisation in job tasks.	37
22. Large gap exists between skill use and proficiency in the Netherlands	38
23. Temporary employment is common in the Netherlands.	40
24. Few temporary workers move to permanent full-time jobs	41
25. Informal on-the-job learning is dominant after the age of 25	43
26. Skills of young NEETs are responsive to training	43
27. Natives have stronger information-processing skills than foreign-born adults . .	45
28. Gap between native and second-generation immigrant students is important . .	46
29. Employment and participation rates of foreign-born are relatively low	47
1.1. Investment had already been weakening before it was hit by the crisis.	58
1.2. Plunge in new construction was not caused by overinvestment	60
1.3. Lower capital-per-worker growth weighed on trend productivity	61
1.4. Gap between non-residential investment needs and actual investment is substantial.	62
1.5. Lower investment by business services has driven the decline in investment intensity.	63

1.6. Investment in ICT equipment has grown fast, but investment in intangibles has stalled	63
1.7. Household spending on housing has increased, but remains moderate.	65
1.8. Support for business R&D is skewed towards tax incentives	69
1.9. SMEs and large firms each account for half of business investment.	70
1.10. Meeting the target for renewable energy is at risk	71
1.11. Infrastructure budget has been almost fully allocated until 2028	73
1.12. Corporate profitability has fallen and growth in corporate savings has stopped	74
1.13. Bank lending is still bottoming out	75
1.14. Bank lending constraints for small and medium-sized enterprises (SMEs) remain high.	76
1.15. Public programs supported SMEs' access to credit during the crisis and beyond	77
1.16. Small bank loans are relatively expensive	78
2.1. Literacy skills of immigrants, less educated and the old lag behind other groups and peers	89
2.2. Changing demand for skills has led to a polarisation in job tasks	89
2.3. Performance in problem solving is relatively low	92
2.4. Teachers' salaries relative to earnings for tertiary-educated workers are comparatively low	93
2.5. Gap between native and second-generation immigrant students is important	94
2.6. Perceived vocational education and training image and quality lag behind	95
2.7. Supply of science and engineering skills is low	97
2.8. Higher educational attainment enhances employment prospects	98
2.9. Large gap exists between skill use and proficiency in the Netherlands	99
2.10. Temporary employment is common in the Netherlands.	100
2.11. Few temporary workers move to permanent full-time jobs	101
2.12. Proportion of high-growth enterprises is significant once a critical size is reached	102
2.13. Informal on-the-job learning is dominant after the age of 25	104
2.14. Youth immigrants are more detached from the labour market than natives.	105
2.15. Skills of young NEETs are responsive to training	106
2.16. More women than men work part-time across younger family types.	107
2.17. Women are less likely than men to be managers, except for full-time working mothers	107
2.18. Financial disincentives to move from part-time to full-time work are significant.	108
2.19. Employment and participation rates of foreign-born are relatively low	111
2.20. Natives have stronger information-processing skills than foreign-born adults	112
