Basic Statistics of Euro Area, 2017	7
Executive summary	9
Key Policy Insights	15
Challenges facing the euro area	16
The upswing continues	19
Normalising monetary policy without disrupting the recovery	26
Resolving non-performing loans to facilitate financial transmission further.....	32
Improving the European fiscal framework	35
Ensuring counter-cyclical fiscal policies in good times	35
Policies to strengthen euro area resilience	38
Severing the link between banks and their sovereigns by completing the Banking Union.....	40
Reducing the home bias in sovereign debt holdings of banks.....	42
Enhancing public risk sharing through a common fiscal stabilisation capacity.....	45
Enhancing private risk sharing by deepening the Capital Markets Union	48
Bibliography	51
Annex. Progress in structural reform.....	55
Thematic chapter	59
Chapter 1. Stabilisation policies to strengthen Euro Area resilience	61
The capacity of the euro area to withstand negative shocks remains limited	62
The crisis has exposed important gaps in the euro area architecture	62
Risk sharing channels in the euro area are insufficient	66
Many measures have already been taken, but progress on remaining issues is needed.....	68
Severing the doom loop by completing the Banking Union.....	70
Unifying the protection of bank deposits	70
Diversifying the sovereign debt exposures of banks.....	72
Creating a European safe asset.....	75
Enhancing common macroeconomic tools to deal with significant adverse shocks.....	76
Introducing a common fiscal stabilisation capacity	77
Improving market discipline through better procedures for sovereign debt restructuring	82
Reinforcing private risk sharing through the Capital Markets Union.....	83
Bibliography	88

Basic Statistics of the European Union, 2017	8
Executive summary	9
Key Policy Insights	15
Challenges facing the European Union.....	16
Recent macroeconomic developments and short-term prospects	18
The upswing continues.....	18
Dealing with the UK departure from the EU	28
Risks on macroeconomic and financial stability are manageable	28
Time is ripe for a reform of the EU budget.....	30
How to finance new priorities and fill in the UK gap in the EU budget?	32
Regional divides need to be addressed more effectively to foster greater trust in the EU.....	33
Reforming cohesion policy to make it more effective	34
Deepening the single market to boost long-term growth.....	38
Services experience significant administrative and regulatory barriers when going	
cross-border.....	41
An integrated EU energy market would be good for consumers, energy security and the	
environment.....	42
Deepening the digital single market.....	43
Strengthening the labour market through greater labour mobility and a better EU-level	
immigration policy.....	45
Fostering intra-EU mobility whilst respecting fair competition and workers' rights.....	46
A better EU approach to immigration	50
Strengthening the drive to fight climate change	52
Bibliography	56
Annex - Progress in main structural reforms	61
Thematic chapter	65
Chapter 1. Building a stronger and more integrated Europe	67
Challenges remain to make growth stronger and more inclusive	68
Better addressing regional divides	70
Improving the effectiveness of cohesion policy.....	70
Focusing cohesion spending on long-term growth items	73
There is scope to make EU cohesion spending more redistributive.....	75
Reducing administrative burdens: the need for fewer, clearer and shorter rules	75
Improving the management of funds.....	77
Reducing slow starts and smoothing transitions between financing periods	79
Deepening the single market is a key EU lever to boost long-term growth and catch up	83
Services experience significant administrative and regulatory barriers when	
going cross-border.....	87

Professional services face constraints to labour mobility and investment	91
A competitive transport system to get the Single Market moving	92
Overcoming the fragmentation of EU energy markets.....	94
Reaping the full benefits of a digital single market.....	98
The EU has continued pursuing an ambitious trade agenda.....	104
Policies to help workers affected by deeper integration and globalisation adapt	105
Bibliography	110
Annex A.1	114

Figures

Figure 1. Trust in the EU is recovering, but remains below pre-crisis levels.....	16
Figure 2. Average well-being is high, but there are significant inequalities	17
Figure 3. Unemployment has fallen but remains significant.....	18
Figure 4. The upturn continues and is broad-based.....	19
Figure 5. The broad-based recovery should positively support investment growth.....	20
Figure 6. Private investment is recovering, while public investment remains subdued	21
Figure 7. Participation rates have risen in many countries	22
Figure 8. The labour market is improving but wage pressures remain limited	22
Figure 9. Regional unemployment rates in the European Union: difference in levels between 2007 and 2016	23
Figure 10. Labour shortages are increasing in some countries, especially in central Europe	24
Figure 11. The EU current account surplus remains high	25
Figure 12. The EU budget is small and has declined over time	30
Figure 13. What does the EU budget finance?	31
Figure 14. Convergence in regional GDP per capita came to a halt with the crisis	34
Figure 15. What does cohesion policy finance?.....	35
Figure 16. Competition in public procurement is weak in many countries.....	36
Figure 17. Slow use of structural funds is common	37
Figure 18. Macroeconomic management is challenging in countries receiving a substantial share of cohesion funding.....	37
Figure 19. The EU has seen a significant decline in potential output growth ¹	38
Figure 20. Implementation of policy recommendations is weak.....	40
Figure 21. Gains from reforms raising productivity by 1% over 5 years ¹	40
Figure 22. The productivity gap is particularly large in services	41

Figure 23. Business uptake of digital technologies could be improved in many firms, especially among smaller ones	44
Figure 24. The internet connection speed is still relatively modest in some countries	44
Figure 25. Europe is rapidly ageing	46
Figure 26. In many EU countries the number of regulated professions is high	48
Figure 27. Only a quarter of posted workers in the EU15 come from lower-wage countries.....	49
Figure 28. The attractiveness of the EU to foreign migrants, especially highly skilled ones, is still relatively limited.....	51
Figure 29. The inflow of refugees is an important challenge	51
Figure 30. CO ₂ intensity and energy intensity have fallen in the EU.....	52
Figure 31. Agreed EU headline targets for climate and energy	52
Figure 32. The rising share of transport in European Union GHG emissions.....	54
Figure 1.1. Trust in the EU is recovering, but remains below pre-crisis levels.....	68
Figure 1.2. Regional disparities are still relevant	69
Figure 1.3. The EU's potential output growth is low.....	69
Figure 1.4. Low-income regions have grown faster than high-income ones.....	71
Figure 1.5. What does cohesion policy finance?	73
Figure 1.6. The quality of institutions needs to improve in some countries.....	74
Figure 1.7. The bulk of cohesion support goes to poorer member states and regions.....	75
Figure 1.8. Errors in the accounting of structural funds are common	78
Figure 1.9. Competition in public procurement is weak in many countries.....	79
Figure 1.10. Slow use of structural funds is common	80
Figure 1.11. Macroeconomic management is challenging in countries receiving a substantial share of cohesion funding.....	80
Figure 1.12. The Single Market is still fragmented.....	84
Figure 1.13. The productivity gap is particularly large in services	85
Figure 1.14. Implementation of policy recommendations is weak.....	86
Figure 1.15. Gains from reforms raising productivity by 1% over 5 years	87
Figure 1.16. There is still room to ease regulations in EU services	88
Figure 1.17. The burden of restrictions falls disproportionately on smaller firms ¹	89
Figure 1.18. Sluggish services reform efforts are linked to productivity divergence.....	89
Figure 1.19. The degree of openness of the EU services market is relatively elevated	91
Figure 1.20. In many EU countries the number of regulated professions is high	92
Figure 1.21. Countries with higher restrictions on road transport export less.....	93
Figure 1.22. Cross-border electricity exchanges have increased markedly in Europe	95
Figure 1.23. Evolution of electricity wholesale prices in Europe ¹	95
Figure 1.24. The EU ICT sector is smaller than in technological leaders	99
Figure 1.25. Large gaps in deployment and quality of broadband infrastructure undermine the development of the Digital Single Market.....	100
Figure 1.26. Business uptake of digital technologies could be improved in many firms, especially among smaller ones.....	102
Figure 1.27. Many individuals still lack digital skills	103
Figure 1.28. The penetration of digital technologies in the public administration is low in some countries	104
Figure 1.29. The European Globalisation Adjustment Fund.....	106
Figure 1.30. A significant share of jobs will be affected by automation.....	107

Boxes

Box 1. Overview of key developments in the Brexit negotiations since early 2018.....	28
Box 1.1. An overview of the European Structural and Investment Funds	70

Box 1.2. Has there been real convergence in the EU?	72
Box 1.3. Reforms to improve the absorption of EU structural funds: selected country experiences	81

Executive summary	9
Key policy insights	15
Economic and social wellbeing are strong.....	15
Economic growth has been robust	22
The current account surplus remains large	30
Low interest rates and high leverage are potential risks to the financial market	31
Fiscal policy can help address structural challenges.....	34
Boosting productivity and preparing for the future of work are key medium-term challenges.....	44
Meeting climate objectives requires more action	59
References.....	63
Annex 1.A. Progress in structural reforms.....	69
Chapter 1. Boosting productivity and preparing for the future of work	75
Productivity growth is held back by slow adoption of new technologies.....	76
Vigorous entrepreneurship accelerates technology diffusion	81
German workers need to prepare for the future of work.....	94
Higher flexibility in work must be flanked by effective worker protection	99
References.....	103
Chapter 2. Improving skills and their use	107
Adult skills are a major determinant of long-term growth and wellbeing	108
Improving the matching of worker skills to jobs could boost productivity	117
Inclusiveness has improved but more progress would boost skills.....	124
Adapting the successful vocational education system in the light of skill-biased technological change	132
Boosting life-long learning would raise well-being and inclusiveness.....	138
References.....	145

Figure 1. How's life in Germany?.....	15
Figure 2. Income inequality among the working population is lower than in most OECD countries after taxes.....	16
Figure 3. Relative poverty is lower than in most OECD countries	17
Figure 4. The incidence of low-pay employment is high	17
Figure 5. Trend productivity growth has diminished and is low in Germany	18
Figure 6. Most German youth are either in employment, education or in training	19
Figure 7. Growth has been strong.....	22
Figure 8. Germany draws high value added from participation in global value chains	23
Figure 9. Germany's exports are strong in high-tech goods	24
Figure 10. The manufacturing sector has increased its global sourcing.....	24
Figure 11. Investment in knowledge-based capital (KBC) is lower than in leading economies.....	25
Figure 12. The labour market is tight but nominal wage growth has remained broadly stable.....	26
Figure 13. Most jobs created are full-time permanent jobs and are in the service sector.....	27
Figure 14. Jobs with the highest and the lowest skill demands have grown strongly	28
Figure 15. Excess savings in the corporate and government sector increased	31
Figure 16. Credit growth is picking up.....	32
Figure 17. House prices are rising but remain broadly in line with income growth	32
Figure 18. The capital to asset ratio is low	33
Figure 19. Primary education spending is low	36
Figure 20. Ageing-related spending will increase	37
Figure 21. Labour taxes on low incomes are high.....	40
Figure 22. Taxes on second earners are high.....	41
Figure 23. Corporate taxes are higher than in most high-income OECD countries.....	41
Figure 24. Environmental tax revenue could be higher.....	43
Figure 25. Policies which raise inclusive growth can be deficit financed in the short and medium term.....	44
Figure 26. Labour productivity is relatively high.....	46
Figure 27. New enterprise creation is weak	47
Figure 28. The insolvency regime is among the most efficient in OECD countries	47
Figure 29. The internet connection speed is slow	50
Figure 30. The share of middle-skilled jobs in employment has declined	51
Figure 31. Many jobs are at risks of significant change.....	51
Figure 32. Adult skills are above OECD average, but lower than in leading OECD countries, especially in literacy	52
Figure 33. Performance gaps with respect to leading countries are larger for adults with low and intermediate educational attainment.....	53
Figure 34. The share of resilient students has increased strongly over the past 9 years.....	54
Figure 35. Literacy skills improve modestly in upper secondary vocational education.....	55
Figure 36. Participation in life-long learning can be raised further.....	56
Figure 37. The earnings gap between men and women is particularly large among highly educated workers	57
Figure 38. Women's skills are used less than men's.....	58
Figure 39. Green growth indicators: Germany	60
Figure 1.1. Labour productivity is relatively high.....	76
Figure 1.2. Labour productivity growth has been subdued	77
Figure 1.3. The productivity gap between frontier firms and the rest has widened	77

Figure 1.4. Productivity growth in the service sector is low	78
Figure 1.5. Labour productivity growth of small and medium sized enterprises is low	79
Figure 1.6. The productivity gap between large firms and SMEs is large	80
Figure 1.7. The role of knowledge-based capital in productivity growth is small	81
Figure 1.8. New enterprise creation is weak	82
Figure 1.9. The share of self-employment is relatively low	82
Figure 1.10. Entrepreneurship is concentrated in less technology-intensive activities	83
Figure 1.11. The survival rate of the self-employed business is low	84
Figure 1.12. Women's self-employment is concentrated in less technology intensive services	85
Figure 1.13. About one-third of German women have entrepreneurial skills	85
Figure 1.14. The use of e-government services is low	87
Figure 1.15. The insolvency regime is among the most efficient in OECD countries	89
Figure 1.16. German SMEs engage more in incremental innovation.....	90
Figure 1.17. Germany does not provide tax relief to R&D expenditure	91
Figure 1.18. The internet connection speed is slow	92
Figure 1.19. Fibre penetration is significantly lower than the OECD average.....	93
Figure 1.20. The share of middle-skilled jobs in employment has declined	95
Figure 1.21. Middle-skilled jobs in Germany decreased in a wide range of sectors	96
Figure 1.22. Many jobs are at risks of significant change	96
Figure 1.23. Low- to mid-level skill jobs face particularly high risk of automation.....	97
Figure 1.24. Manufacturing and some services face particularly high risk of automation.....	98
Figure 1.25. The solo self-employed in Germany are diverse.....	101
Figure 2.1. Education, literacy proficiency and use of reading at work boost wages	109
Figure 2.2. Almost all Germans have attained at least upper secondary education	111
Figure 2.3. Most adults possess upper secondary vocational degrees	112
Figure 2.4. Most German youth are either in employment, education or in training	113
Figure 2.5. Unemployment is high among the unskilled.....	114
Figure 2.6. Real wages rose only for high-skill workers between 1990 and 2010.....	114
Figure 2.7. Adult skills are above OECD average, but lower than in leading OECD countries, especially in literacy	115
Figure 2.8. Performance gaps with respect to leading countries are larger for adults with low and intermediate educational attainment	116
Figure 2.9. Dispersion of adult cognitive skills is large	117
Figure 2.10. ICT skills are lower than in leading countries, especially among the young.....	117
Figure 2.11. Field-of-study mismatch is low but overqualification is above the OECD average	119
Figure 2.12. Reducing mismatch boosts productivity	120
Figure 2.13. The earnings gap between men and women is particularly large among highly educated workers	121
Figure 2.14. Women's skills are used less than men's	122
Figure 2.15. Low parental education is an important predictor of skills	125
Figure 2.16. The share of resilient students has increased strongly over the past 9 years.....	127
Figure 2.17. Disadvantaged students are at higher risk of low performance ¹	128
