Basic statistics of Belgium, 2015	8
Executive summary	9
Assessment and recommendations	13
Macroeconomic developments and short-term prospects	21
Medium-term policy challenges to reignite productivity and strengthen inclusiveness	28
Making the business environment more supportive of productivity gains	44
Raising and mobilising skills to boost growth and inclusiveness	50
References	60
Annex. Follow-up to previous OECD policy recommendations	65
Thematic chapters	
Chapter 1. Making the business environment more supportive of productivity	73
Strengthening innovation at the frontier	77
Fostering corporate dynamism	81
Enhancing technological diffusion throughout the economy	88
Continuing infrastructure and regulatory reforms	90
Policy Recommendations on improving the business environment	93
References	94
Chapter 2. Raising and mobilising skills to boost productivity and inclusiveness	97
Making the most of an ageing society	98
Preserving Belgium's comparative advantage in education	102
Better matching skills with labour market needs	111
The promises and challenges of digitalisation	116
Policy recommendations to raise skills for higher productivity growth and more inclusiveness	120
References	120
Annex 2.1. Firm-level analysis of workforce composition's impact on productivity ..	123
Annex 2.2. Wage premium	126
Boxes	
1. Government of Belgium	19
2. Plans for a Strategic Investment Pact	32
3. Main elements of the 2015 pension reform	38

4. Amendments to the wage-setting system	41
1.1. The decline in productivity growth is partly a composition effect.....	75
1.2. The challenge of measuring productivity.....	76
1.3. Regional research support policies	80
2.1. Main barriers to the development of adult education and training (AET).....	101
2.2. Measuring over- and under-education	105
2.3. Main elements of education reforms in the communities	108
2.4. Skills mismatch	111
2.5. The productivity of university-educated workers as a function of the distance to the efficiency frontier	113
2.6. E-platforms, "alternative" jobs and the need for a relevant legal framework ...	118

Tables

1. Macroeconomic developments	23
2. Extreme vulnerabilities for the Belgian economy	24
3. Past OECD recommendations on macroeconomic and financial policies	28
4. Changes in the structural balance (efforts realised and planned) and the primary balance.....	29
5. Fiscal projections of main forecasting institutions.....	29
6. Past OECD recommendations on public investment	31
7. Main federal and regional measures on taxation	34
8. Past OECD recommendations on taxation.....	34
9. Past OECD recommendations on pension reform.....	37
10. Past OECD recommendations on wage-setting and competition policy	41
11. Past OECD recommendations on green growth.....	44
12. Growth rate of the number and start-ups and failures in Belgium	47
13. World Bank Doing Business indicator for Enforcing Contracts	48
14. Long-term unemployment among seniors (aged 55+)	53
15. Past OECD recommendations to enhance labour market integration of immigrants, mobility and skills.....	55
16. A persistent immigrant-native employment gap	56
17. Changes in the number of students, expenditure on educational institutions and expenditure per student in tertiary education	56
1.1. The productivity gap widens with distance to multinationals	89
2.1. Early drop-out and unemployment rates.....	107
2.2. Changes in the number of students, expenditure on educational institutions and expenditure per student in tertiary education	110

Figures

1. GDP growth has weakened since the crisis	14
2. Belgium performs well on almost all dimensions of inclusiveness and well-being	15
3. The pace of reforms has increased	16
4. The level of productivity is high but productivity growth has slowed.....	17
5. Regional disparities in well-being	18
6. Regional disparities in student performance and unemployment are large ..	20
7. Employment rate amongst some groups is low	20

8. Short-term macroeconomic developments	22
9. The fiscal situation is improving	25
10. Private sector debt	25
11. The housing market is a relatively moderate downside risk	26
12. The banking sector has been strengthened	27
13. Interest rates have declined	28
14. Debt-to-GDP ratio simulations	29
15. Public investment is low	30
16. Taxation on labour has been reduced	33
17. Tax rates relative to other OECD countries	35
18. The statutory corporate income tax rate is high	36
19. Ageing and jobs	37
20. SMEs' access to finance could be improved	39
21. Ratio of export volumes to export markets	40
22. Environmental challenges	43
23. Multifactor productivity growth has slowed for frontier and laggard firms ...	44
24. R&D investment is around the OECD average	45
25. Business dynamism is weak	47
26. More should be done to foster entrepreneurship culture	48
27. The distribution of labour productivity across firms is wide	48
28. Some sectors remain highly regulated	49
29. The potential impact of regulation on skills mismatches	50
30. Participation in adult education and training is low	52
31. Estimation of relative wages for seniors are comparatively high in Belgium ..	53
32. The progression of education attainment is slowing down	54
33. The educational attainment of immigrants is low	54
34. Public expenditure on active labour market policies	58
35. Building skills for the future	59
1.1. The level of productivity is high but productivity growth has slowed	74
1.2. Productivity slowdown has been continuous since the 1970s	75
1.3. R&D investment is around OECD average	78
1.4. Business dynamism is weak	82
1.5. Administrative burdens on start-ups	83
1.6. Venture capital could be strengthened	84
1.7. More should be done to foster entrepreneurship culture	86
1.8. Intellectual asset generation and commercialisation are relatively weak	87
1.9. Innovation outcomes are generally strong	88
1.10. The distribution of labour productivity across firms is wide	88
1.11. ICT usage in Belgian firms is comparatively high	91
1.12. ICT adoption by enterprises varies across regions	91
1.13. Some sectors remain highly regulated	92
2.1. The workforce is ageing	99
2.2. The employment rate of seniors is comparatively low	100
2.3. Participation in adult education and training is low	101
2.4. Estimated relative wage for seniors is comparatively high in Belgium	102
2.5. The rise of educational attainment underpins Belgium's prosperity	103
2.6. The progression of education attainment is slowing down	104

2.7. Education mismatches remains comparatively moderate	105
2.8. The return from tertiary education is high in terms of gross wages and time in unemployment	106
2.9. There is room to improve educational attainment	108
2.10. Percentage of teachers who report having participated in professional development with content in teaching in multicultural settings	109
2.11. Share of population aged 25-34 with tertiary education and share of public financing of tertiary education institutions	110
2.12. Improving allocative efficiency of skills would boost productivity	112
2.13. There is room to better allocate university-educated workers	113
2.14. Geographical mobility and workers' reallocation rates	114
2.15. Decline in skills mismatch from easing product market regulation could be substantial	115
2.16. Building skills for the future	117

Basic statistics of Slovak Republic, 2016	8
Executive summary	9
Assessment and recommendations	13
Maintaining solid growth in living standards over the longer term will be challenging	17
Improving labour market performance	34
Improving well-being and sustainable development	47
Bibliography	56
Annex. Progress in structural reform	61

Thematic chapters

Chapter 1. Enhancing advanced skills to better meet labour market demand	67
Better skilled workers will be needed	68
Improving skills formation at secondary schools	71
Boosting skills in tertiary education	79
Securing the skills of the workforce over time	90
Recommendations to enhance advanced skills	96
Bibliography	97
Chapter 2. Improving the efficiency and outcomes of the Slovak health-care system ...	101
The health-care system needs to become more effective	102
Improving the health-care system will require reforms in several areas	114
Recommendations to improve the health-care system	138
Bibliography	139
Appendix 1.A1.	143

Boxes

1. Slovakia's high reliance on the automotive industry	19
2. A steady implementation of the 2012 pension reform is crucial	25
1.1. VET reform	74
1.2. Tertiary education funding – main features	83
1.3. Skills mismatch and worker characteristics	87
2.1. The Slovak health-care system	115

Tables

1. Macroeconomic indicators and projections.....	18
2. Possible shocks to the Slovak economy	20
3. Housing loans.....	22
4. Past OECD recommendations on fiscal policy.....	27
5. Past OECD recommendations on taxation.....	28
6. Past OECD recommendations on raising the efficiency of public spending ...	31
7. Past OECD recommendations on improving the judicial system and fighting corruption.....	32
8. Past OECD recommendations on product market reforms	34
9. Past OECD recommendations on the labour market	37
10. Past OECD recommendations on the housing sector.....	40
11. Past OECD recommendations on education	43
12. Past OECD recommendations on the environment	56
2.1. Health outcome performance	104
2.2. Projected increases in public health and long term care spending by main source, 2010-60	113

Figures

1. Slovakia is performing strongly.....	14
2. Poverty and inequality are low but some other well-being dimensions lag behind	15
3. Slovakia's GDP per capita is catching up, but its population is ageing	16
4. The biggest share of Slovakia's exports is vehicles and most exports go to EU countries	17
5. The car industry in the Slovak republic	19
6. Evolution of macro-financial vulnerabilities	20
7. Financial and housing credit development	21
8. Foreign trade exposure	22
9. Convergence will be hampered by population ageing	23
10. The Roma are much younger.....	24
11. The number of emigrants from Slovakia has increased significantly	24
12. Structural reforms and fiscal measures can ensure sustainability	26
13. Efficiency of VAT collection.....	27
14. Taxes in the Slovak Republic	28
15. Composition of general government spending.....	29
16. Public investment spending.....	30
17. Effectiveness of public administration	31
18. Perception of the effectiveness of judicial system	32
19. The business environment	33
20. Mothers with young children tend to withdraw from the labour market.....	35
21. Mothers with small children face incentives to work	35
22. Long-term unemployment is high.....	36
23. Low spending in active labour market policies.....	37
24. Roma's employment is low.....	38
25. Regional economic inequalities.....	39
26. Regional mobility and housing indicators	40

27. Adult skills in literacy and problem solving.....	42
28. Teachers are amongst the lowest paid in the OECD.....	42
29. Roma student performance is weak.....	44
30. A low proportion of young adults have high-level literacy skills.....	44
31. Slovak researchers produce many publications, but their average quality is poor.....	45
32. Qualification and education mismatches among young tertiary educated graduates are high.....	46
33. Many Slovak students study abroad and only few foreigners study in the Slovak Republic.....	47
34. Health-care spending and outcomes.....	48
35. Health inequalities and perceived mismanagement.....	49
36. Potential efficiency gains in health care.....	49
37. Hospital care.....	50
38. Primary care indicators.....	51
39. Pharmaceutical and other medical goods and service spending.....	53
40. Long-term care.....	53
41. Green growth indicators: Slovak Republic.....	55
42. Deaths from ambient air pollution.....	56
1.1. Risk of job loss due to automation.....	68
1.2. Adult skills in literacy and problem solving.....	69
1.3. Companies are increasingly having problems to find skilled and educated workers.....	70
1.4. Schools and labour market outcomes are weak.....	71
1.5. Teachers are amongst the lowest paid in the OECD.....	72
1.6. Higher salaries are important to raise the attractiveness of the teaching profession.....	72
1.7. Share of vocational programme enrolment rates in upper secondary education.....	74
1.8. Slovak VET students' skills are unsatisfactory.....	75
1.9. Impact of socio-economic status on students' learning outcomes.....	76
1.10. Major risks for socio-economically disadvantaged children becoming low-performing students.....	77
1.11. Roma have poor school attendance resulting in weak skills.....	78
1.12. Tertiary education has expanded.....	80
1.13. A low proportion of young adults have high-level literacy skills.....	81
1.14. Slovak researchers produce many publications, but they could be improved in terms of quality.....	83
1.15. Tertiary education system lacks vocational bachelor programs.....	85
1.16. Qualification and education mismatches among young tertiary educated graduates are high.....	88
1.17. Mismatched workers suffer wage penalties, despite similar skills to well-matched workers.....	89
1.18. The skills assessment system is underdeveloped.....	89
1.19. The stock of emigrants has increased significantly.....	91
1.20. The impact of brain drain on the competitiveness is substantial.....	91

1.21. Many Slovak students study abroad and only few foreigners study in the Slovak Republic	93
1.22. The Blue Card threshold is more restrictive in the Slovak Republic than in other selected OECD countries.	94
1.23. The relative unemployment rate of individuals with lower secondary versus tertiary education	95
1.24. Participation in life-long learning across Europe by educational attainment . . .	95
2.1. Slovak life expectancy at birth is comparatively low even adjusted for per capita incomes.	102
2.2. Slovak life expectancy outcomes are relatively poor	103
2.3. Selected health indicators of the Roma and non-Roma population	105
2.4. Regional disparities of infant mortality in OECD countries.	106
2.5. Health inequalities by socioeconomic status	106
2.6. Satisfaction with the healthcare system	107
2.7. Household out-of-pocket expenditure on health care	107
2.8. Perception of corruption in the public healthcare sector.	108
2.9. Average waiting days for elective surgery	109
2.10. Growth of health-care spending	110
2.11. Expenditure on health.	111
2.12. Potential efficiency gains in health care.	112
2.13. Health administrative spending by type of healthcare system.	118
2.14. Hospital care supply	120
2.15. Nurses related indicators	122
2.16. Mortality from selected diseases	124
2.17. Primary care indicators	125
2.18. Physician density and activity	126
2.19. Age structure of physicians	127
2.20. Emigration rates of doctors	127
2.21. Pharmaceutical expenditure	130
2.22. Other medical goods and ancillary health services	131
2.23. Long-term care	133
2.24. Life style indicators	136
2.25. Selected indicators of Roma versus non-Roma living conditions.	137

Basic statistics of Iceland, 2015	8
Iceland at a glance	9
Macroeconomic indicators	10
Fiscal indicators	11
Well-being indicators	12
Inequality and gender equality indicators	13
Green growth indicators	14
Executive summary	15
Assessment and recommendations	19
Economic growth is strong but challenges remain	20
Monetary policy: taming inflation in roaring times	24
Exiting exchange controls	28
Fiscal policy should be contractionary	32
A tax system conducive to inclusive and green growth	38
Reforms to improve the business environment	40
Making the best of the tourism boom	44
Iceland's labour market	48
Bibliography	55

Thematic chapters

Chapter 1. Sustaining nature-based tourism in Iceland	59
Iceland's tourism boom	61
Tourist arrivals and demand	62
Tourism is highly dependent on nature	63
The impact on the economy	65
Ensuring tourism is sustainable and inclusive	73
The policy framework has been evolving	86
Recommendations	91
References	92
Chapter 2. Labour market and collective bargaining in Iceland: Sharing the spoils without spoiling the shares	95
Collective bargaining and the labour market	98
Towards effective and inclusive labour relations	110
Recommendations on collective bargaining	121
Bibliography	121

Boxes

1. Costs and benefits of pegging the króna	26
2. Banks have re-emerged from the crisis	28
3. State guarantees.	36
4. Reducing gender gaps in the labour market	49
1.1. Tourism booms, slowdowns and risks of reversal.	71
1.2. Tourist numbers and the environment.	74
1.3. Environmental certification	77
1.4. Private short-term rentals and the sharing economy	81
1.5. Statistics and research to support decision making.	87
2.1. The Icelandic pension system	103
2.2. Reducing gender gaps in the labour market	107

Tables

1. Demand, output and prices projections	23
2. Vulnerabilities that could lead to major changes in the outlook	25
3. Past OECD recommendations on monetary policy and financial stability	32
4. Past OECD recommendations on fiscal sustainability	37
5. Past OECD recommendations on green growth.	40
6. Past OECD recommendations on productivity growth.	43

Figures

1. Growth after the crisis has been strong	21
2. Macroeconomic developments	22
3. Major imbalances have been corrected	24
4. Inflation and inflation expectations have been low	25
5. Domestic inflationary pressures have built up	25
6. Icelandic exchange rate	27
7. Banks have re-emerged from the crisis	29
8. The new capital flow management measure had a sharp effect on the bond market.	31
9. The fiscal position has greatly improved but has become expansionary recently	33
10. Relaxing fiscal policy risks reverting to unsustainable trends	34
11. Spending on social protection jumped after the crisis.	35
12. Disability rolls continue to rise	35
13. Spending efficiency in education appears comparatively low	36
14. State guarantees.	37
15. Income taxes account for an increasingly large share of tax revenue.	38
16. VAT revenue is low as a share of the tax base, 2014	39
17. Labour productivity is low compared to peers	40
18. Productivity growth has slowed.	41
19. Competitiveness has been eroded.	41
20. Firm creation is picking up again	42
21. Firm insolvency has risen.	43

22. Service trade restrictiveness index (STRI)	43
23. Tourism is rapidly becoming one of the pillars of the economy	45
24. House prices have risen and affordability can be a challenge	47
25. Migration flows are heavily influenced by the economic cycle	48
26. Labour force participation is high	49
27. The Gender Gap Index	50
28. Union density in Iceland is the highest in the OECD	50
29. Inequality is the lowest in Iceland	51
30. Wage awards have exceeded productivity growth	52
31. Trust has been undermined	53
1.1. International tourist numbers have risen dramatically	60
1.2. Tourism has taken off since 2010	61
1.3. International visitors are becoming more diversified and mainly stay overnight	62
1.4. International travel at Keflavik is highly seasonal	63
1.5. Most visitors come to experience nature	64
1.6. Iceland is a reasonably competitive tourism destination	65
1.7. Tourism is now a major export earner	66
1.8. The króna has appreciated strongly since 2013	66
1.9. Tourism represents a sizeable share of GDP and employment	67
1.10. Immigration is rising strongly, though many continue to leave	68
1.11. Employment and firm creation in tourism services is growing robustly	69
1.12. New accommodation is being added, but occupancy rates keep rising	70
1.13. The exchange rate has begun to appreciate, unwinding some of the depreciation after the crisis	70
1.14. VAT base broadening has had visible impacts	72
1.15. Maximising the number of tourists is not the best strategy	74
1.16. Arrivals of cruise line passengers is rising	77
1.17. Private accommodation accounts for a rising share of overnight stays	80
1.18. Rents are high	80
1.19. House prices are picking up and residential investment is beginning to respond	82
1.20. Employment growth is not strongly linked to gains in output per worker	83
1.21. Unemployment rates for people with tertiary education have been slower in coming down	84
1.22. Reallocation on average has had little impact on wage gains	85
2.1. There have been recurrent episodes of high wage awards	96
2.2. Migration flows are heavily influenced by the economic cycle	99
2.3. Unemployment rate has been low and labour force participation is high	100
2.4. GDP per capita is high due to work effort, while productivity is low	100
2.5. Union density in Iceland is the highest in the OECD	102
2.6. Employers' organisation density	105
2.7. Inequality is the lowest in Iceland and has decreased since 2007	106
2.8. Effective retirement age of women and the gender gap	108
2.9. A pact between social partners helped fight inflation in the early 1990s	108
2.10. Wage awards have exceeded productivity growth	109

2.11. Competitiveness has been eroded.....	110
2.12. Trust has been undermined	111
2.13. Wages in the public sector often lag behind the private sector	116
2.14. Proposed institutional framework of wage bargaining in Iceland	119
