|--|-----------|
| Executive summary | 9 |
| 1 Key Policy Insights | 16 |
| The COVID-19 shock has thrown the export-driven recovery off track | 20 |
| Repairing bank balance sheets to support investment | 29 |
| A package of structural reforms would strengthen the recovery, improve social inclusion and reduce the public debt | 39 |
| Enhancing public financial management to support growth and inclusiveness | 48 |
| Improving the business environment | 55 |
| Protecting the environment | 70 |
| References | 75 |
| 2 Rejuvenating Greece's labour market to generate more and higher-quality jobs | 80 |
| The COVID-19 shock has stalled Greece's labour market recovery, accentuating long-standing challenges | 81 |
| Social protection to support employment, redress poverty and improve resilience | 86 |
| Improving employment outcomes through active labour market policies | 97 |
| Reforming the tax system to encourage formalisation and inclusiveness | 103 |
| Wage-setting mechanisms to generate more jobs and raise productivity | 107 |
| Strengthening education and professional skills | 112 |
| Policy recommendations for a more inclusive and better performing labour market | 123 |
| References | 124 |

FIGURES

| | |
|---|----|
| Figure 1. GDP per capita has recovered from the crisis | 10 |
| Figure 2. Employment rates are low, especially for women | 11 |
| Figure 3. Poverty rates are highest among the young | 12 |
| Figure 4. The population is ageing fast | 13 |
| Figure 5. The labour income tax wedge is high | 13 |
| Figure 6. Adult skills need to be upgraded | 13 |
| Figure 1.1. The COVID-19 pandemic has set back Greece's economic recovery | 16 |
| Figure 1.2. Greece lags other OECD countries in many well-being and equality indicators | 17 |
| Figure 1.3. Further reforms would boost growth | 18 |
| Figure 1.4. Greece's strong containment measures have limited infections, but have frozen the labour market | 21 |
| Figure 1.5. The COVID-19 shock sets back Greece's export and consumption-driven recovery | 22 |
| Figure 1.6. The COVID-19 shock has reversed the rise in business and consumer confidence | 23 |
| Figure 1.7. The current account deficit has narrowed, helped by the government budget shifting to surplus | 23 |
| Figure 1.8. Around 65% of goods exports are bound for other European countries | 24 |
| Figure 1.9. Production is shifting towards tradable sectors but not employment | 25 |
| Figure 1.10. Fiscal consolidation has relied more on revenues than spending | 26 |

| | |
|---|-----|
| Figure 1.11. Recent reforms have markedly lowered the tax rate on distributed profits | 27 |
| Figure 1.12. Bank deposits have been increasing | 32 |
| Figure 1.13. Banks' capital ratios exceed thresholds and return on assets has improved | 32 |
| Figure 1.14. Bank lending rates to firms have fallen, but remain higher than in other euro area countries | 33 |
| Figure 1.15. The demand for loans has increased but credit standards have yet to ease | 34 |
| Figure 1.16. The stock of non-performing loans has been declining but remains high | 35 |
| Figure 1.17. Ambitious reforms to boost employment, investment and productivity will increase GDP growth and incomes | 41 |
| Figure 1.18. Comprehensive structural reforms will lower the public debt ratio | 43 |
| Figure 1.19. Gross financing needs are projected to remain modest under most scenarios | 44 |
| Figure 1.20. Greece's public pension spending is high and makes up more than half of social spending | 47 |
| Figure 1.21. Greece's pension spending will decline but remains high | 47 |
| Figure 1.22. Businesses perceive train services to lag other OECD countries | 50 |
| Figure 1.23. Greece has experienced a fast increase in tax revenues relative to GDP | 52 |
| Figure 1.24. Statutory tax rates have increased and are high compared with OECD-EU countries | 53 |
| Figure 1.25. Greece's tax-free threshold is high | 53 |
| Figure 1.26. The VAT gap remains high | 54 |
| Figure 1.27. OECD product market regulation in Greece has improved since 2013 | 56 |
| Figure 1.28. There is scope to lower restrictions to product-market competition in many sectors | 57 |
| Figure 1.29. Perceived levels of corruption are high in Greece but controls are improving | 60 |
| Figure 1.30. There is still scope to improve the framework to fight economic crimes | 61 |
| Figure 1.31. The justice system is slow | 62 |
| Figure 1.32. Low R&D spending is pervasive across industries | 63 |
| Figure 1.33. Gross expenditure on R&D has been increasing | 64 |
| Figure 1.34. Spending for innovation is low and concentrated mostly on existing technology | 65 |
| Figure 1.35. Research productivity is low | 66 |
| Figure 1.36. Accessing finance is the chief barrier preventing businesses' innovative activities in Greece | 66 |
| Figure 1.37. Greece's government support for business R&D activities has increased but it is still low compared with other OECD countries | 67 |
| Figure 1.38. The generosity of Greece R&D tax incentives has increased | 68 |
| Figure 1.39. Air pollution, waste management and water stress are the main environmental challenges | 72 |
| Figure 2.1. The COVID-19 shock sets back the recovery of Greece's labour market | 81 |
| Figure 2.2. The quantity and quality of jobs in Greece lag other OECD countries | 82 |
| Figure 2.3. A large share of youth are not in work or education | 83 |
| Figure 2.4. Like other countries, Greece has experienced polarisation away from mid-skill jobs | 84 |
| Figure 2.5. Few jobs are being created in high productivity sectors | 85 |
| Figure 2.6. Skill mismatch is high | 85 |
| Figure 2.7. Poverty though falling remains high, especially among the young and those out of work | 87 |
| Figure 2.8. Pensions rather than social transfers reduce inequality and poverty in Greece | 88 |
| Figure 2.9. The Guaranteed Minimum Income transfers are modest compared with most countries' programmes | 90 |
| Figure 2.10. Stronger social protection and reducing the labour income tax wedge would support households across the income distribution | 91 |
| Figure 2.11. A strengthened Guaranteed Minimum Income, with low-wage in-work benefits and progressive tax and contribution rates would support low-wage incomes and work incentives | 94 |
| Figure 2.12. Females living in households with dependents are less likely to work in Greece | 95 |
| Figure 2.13. Greece lacks care personnel | 96 |
| Figure 2.14. Greece can greatly raise active labour market policy spending and performance | 97 |
| Figure 2.15. Employment subsidies absorb most of Greece's small active labour market policies | 102 |
| Figure 2.16. Tax and social insurance contribution wedges are high in Greece | 104 |
| Figure 2.17. Tax and contribution rates differ between employment types | 105 |
| Figure 2.18. A large share of workers in Greece are self-employed | 105 |
| Figure 2.19. Greece's self-employed more often report low incomes to tax authorities than to other surveyors | 106 |
| Figure 2.20. Reforms should lower labour tax and contribution rates and reduce the difference in tax wedges between employment types | 107 |
| Figure 2.21. The COVID-19 shock sets back the gradual recovery in jobs and wages | 108 |
| Figure 2.22. Wage-setting in Greece has shifted away from collective agreements | 109 |
| Figure 2.23. The 2019 increase lifts Greece's minimum wage to near the middle of OECD countries | 111 |
| Figure 2.24. Following the 2019 minimum wage increase, wages rose across the lower end of the wage distribution | 111 |

| | |
|---|-----|
| Figure 2.25. Education spending is lagging and many adults would benefit from skill upgrading | 113 |
| Figure 2.26. Greece school students' test performance continues to lag other OECD countries | 114 |
| Figure 2.27. Few young children in Greece participate in early childhood education | 114 |
| Figure 2.28. Greece lags behind in access to and participation in adult learning | 118 |
| Figure 2.29. Workers are underprepared for the looming disruption to jobs from automation | 119 |
| Figure 2.30. Adults in Greece need to boost their digital skills | 121 |

TABLES

| | |
|---|----|
| Table 1. The COVID-19 pandemic has derailed the recovery | 10 |
| Table 1.1. Overview of Greek government's policy priorities | 19 |
| Table 1.2. Low probability events that could lead to major changes in the outlook | 29 |
| Table 1.3. Macroeconomic indicators and projections | 30 |
| Table 1.4. A policy reform package to boost income into the long term | 40 |
| Table 1.5. Assumptions of debt simulations | 44 |
| Table 1.6. Illustrative fiscal impacts of recommended reform package | 45 |
| Table 1.7. Greece's progress on OECD Recommendations of the Council on Budgetary Governance | 48 |
| Table 2.1. Effects of recent and recommended tax and benefit policy reforms on poverty, inequality, public finances and work incentives | 92 |
| Table 2.2. The current Guaranteed Minimum Income equivalence scale is less generous to larger households | 97 |

| | |
|---|-----------|
| Executive Summary | 9 |
| 1 Key Policy Insights | 15 |
| Overview and recent trends in well-being, inequality and poverty alleviation | 16 |
| The pandemic has worsened an already fragile economic outlook | 19 |
| Monetary and financial authorities are stabilising financial markets | 23 |
| Stabilising debt and stimulating the economy | 26 |
| The crisis deepens existing fiscal challenges | 26 |
| Managing spending pressures: The government wage bill | 31 |
| Reforming state-owned enterprises to limit government contingent liabilities | 35 |
| Managing spending pressures: Financing higher education | 39 |
| A growth strategy for South Africa | 42 |
| Reforming product and services markets | 42 |
| Reaping the benefits of participating in global value chains | 46 |
| Key investments to boost growth | 47 |
| Accelerate the land reform process to lift the uncertainty it creates | 50 |
| Better manage scarce water resources | 52 |
| Water prices are too low in agriculture | 54 |
| Municipal water services are inefficient | 55 |
| References | 57 |
| Annex. Progress on structural reforms | 61 |
| 2. Building an inclusive social protection system | 67 |
| The social protection system is incomplete | 68 |
| Assessing social transfers and the unemployment insurance | 70 |
| Develop active labour market policies to complete the unemployment insurance scheme | 70 |
| Overview of cash transfers | 71 |
| The impact of social grants on the poor | 74 |
| Issues of concern and proposals for broadening the social protection | 76 |
| Building a comprehensive pension system | 79 |
| The current pension system is not adequate in reducing the risk of old-age poverty | 79 |
| Reforming the pension system | 83 |
| Policies to safeguard and build robust pension schemes | 85 |
| Building on the proposals of the government discussion paper | 86 |
| Reforming the health care system for better quality, access and efficiency | 89 |
| Overview of health outcomes, healthy life styles and preventive policies | 89 |
| Improving the coherence and organisation of the health care system | 94 |
| Challenges related to introducing a National Health Insurance scheme | 96 |
| The health insurance market | 97 |

| | |
|---|------------|
| Improving the delivery of health care | 100 |
| The financing of the new social protection system | 107 |
| 3 Leveraging tourism development for sustainable and inclusive growth | 118 |
| Tourism and the economy | 120 |
| Integration of tourism in global and local value chains | 121 |
| Business sector dynamics | 124 |
| Tourism development to support employment growth | 127 |
| Fiscal impact of tourism | 130 |
| Recent tourism developments and tourism prospects in South Africa | 130 |
| International tourism | 132 |
| Domestic tourism | 137 |
| Ensuring tourism development translates into sustainable and inclusive growth | 138 |
| Supporting regional development through tourism | 139 |
| Ensuring that tourism development is environmentally sustainable | 143 |

Figures

| | |
|--|----|
| Figure 1. Growth has collapsed following a modest performance in the past decade | 10 |
| Figure 2. Direct contribution of tourism to the economy | 12 |
| Figure 1.1. A strong redistributive policy | 16 |
| Figure 1.2. Redistribution reduces poverty | 17 |
| Figure 1.3. Well-being ranks low on many dimensions | 18 |
| Figure 1.4. Barriers to competition in the economy remain high | 18 |
| Figure 1.5. Growth will recover only slowly | 20 |
| Figure 1.6. Macroeconomic developments have deteriorated | 21 |
| Figure 1.7. Inflation has slowed down | 24 |

| | |
|--|-----|
| Figure 1.8. Financial institutions were robust before the crisis | 25 |
| Figure 1.9. Fiscal accounts have deteriorated | 28 |
| Figure 1.10. Actions are necessary to guarantee the sustainability of government debt | 29 |
| Figure 1.11. Compensation of general government employees | 31 |
| Figure 1.12. Public employment is close to the OECD average | 32 |
| Figure 1.13. Remuneration of civil servant managers is relatively high | 33 |
| Figure 1.14. Remuneration of non-managers is also high | 34 |
| Figure 1.15. South Africa performs poorly on corruption measures | 37 |
| Figure 1.16. Public firms grasp on the economy is high | 38 |
| Figure 1.17. Government involvement in the economy through SOEs is high | 39 |
| Figure 1.18. Time until additional income tax payments break even with incurred costs | 42 |
| Figure 1.19. Regulatory restrictions are still high | 43 |
| Figure 1.20. Regulations remain restrictive in retail and professional services | 44 |
| Figure 1.21. Foreign value-added content of gross exports | 46 |
| Figure 1.22. Import tariffs on intermediate and capital goods are relatively low compared to some emerging peers | 47 |
| Figure 1.23. Green growth indicators | 48 |
| Figure 1.24. Public infrastructure investment has stalled | 49 |
| Figure 1.25. Individual land ownership of farms and agricultural holdings | 51 |
| Figure 1.26. Water stress and water shortage | 53 |
| Figure 2.1. Unemployment insurance claims by type of benefit | 70 |
| Figure 2.2. Distribution of social grants has been increasing | 73 |
| Figure 2.3. Spending on social transfers is high | 74 |
| Figure 2.4. Social grants spending has been increasing steadily in the last decade | 74 |
| Figure 2.5. Poverty rate after taxes and transfers | 75 |
| Figure 2.6. Coverage of informal workers is low | 79 |
| Figure 2.7. Pension levels are low | 81 |
| Figure 2.8. The retirement age is adequate | 83 |
| Figure 2.9. Mortality is still high | 84 |
| Figure 2.10. The evolution of the dependency ratio remains favourable | 84 |
| Figure 2.11. Pension coverage increases after introduction of automatic enrolment | 86 |
| Figure 2.12. The proposed contribution rate is not high | 88 |
| Figure 2.13. Life expectancy is improving | 89 |
| Figure 2.14. Despite progress, the main causes of death are still high | 90 |
| Figure 2.15. Health inequalities are high | 91 |
| Figure 2.16. Health risk factors are high | 93 |
| Figure 2.17. Health spending is mostly private | 95 |
| Figure 2.18. Financial structure and evolution of medical schemes | 98 |
| Figure 2.19. Market concentration in the private health care sector | 99 |
| Figure 2.20. The number of health practitioners is low | 103 |
| Figure 2.21. The number of hospital beds is low | 104 |
| Figure 2.22. Outpatient health care services by household income | 105 |
| Figure 2.23. Comparing different source of government revenues to NHI financing needs | 109 |
| Figure 3.1. South Africa is a competitive tourism destination on several dimensions, 2019 | 120 |
| Figure 3.2. Direct contribution of the tourism industry to the economy is moderate | 121 |
| Figure 3.3. Internal tourism consumption stretches beyond traditional tourism products | 122 |
| Figure 3.4. Composition of value added in final demand by accommodation and food services | 124 |
| Figure 3.5. Enterprises are increasingly concentrated in the tourism sector | 125 |
| Figure 3.6. Red tape and licensing create large burden for entrepreneurs and SMEs | 126 |
