| Executive Summary | 9 |
| 1 Key Policy Insights | 15 |
| Introduction | 15 |
| The economy requires substantial macroeconomic policy support | 20 |
| The Czech Republic is experiencing a strong second wave of the coronavirus pandemic | 20 |
| The economy contracted sharply | 21 |
| The recovery will take time and is shrouded by uncertainty | 25 |
| Considerable policy space permits continued support if needed | 27 |
| Monetary policy has room to ease further if needed | 27 |
| Further fiscal policy support is needed | 30 |
| Providing effective support to labour and capital reallocation | 32 |
| Improving fiscal sustainability over the long term | 33 |
| Ageing threatens fiscal sustainability | 33 |
| Reforming the tax system to better support the recovery and future growth | 38 |
| Addressing corruption to raise the effectiveness of public spending | 41 |
| Policies to raise productivity and restart investment | 44 |
| Fostering R&D, innovation and improving the business environment | 44 |
| Accelerating green growth | 51 |
| Countering the adverse environmental impacts of urban sprawl | 53 |
| Increasing labour market participation and building skills | 54 |
| Bringing more mothers to the labour market | 54 |
| Making education and skills more inclusive and better adapted to a changing labour market | 61 |
| References | 66 |
| 2 Enhancing administrative and fiscal decentralisation | 70 |
| Introduction | 71 |
| A fragmented and complex territorial division | 71 |
| Administrative fragmentation increases costs, constrains the quality of services and reduces capacity at the local level | 76 |
| Encouraging mergers and mandating inter-municipal co-operation to tackle fragmentation | 79 |
| Mergers of municipalities should be encouraged | 79 |
| Municipal co-operation is common but it lacks stability | 81 |
| Mandating inter-municipal co-operation and increasing the role of municipalities with extended powers | 82 |
| Fiscal arrangements to improve efficiency | 86 |
| Overall, the fiscal position of local governments is sound but the COVID-19 shock will pose challenges | 86 |
| Distribution of tax revenues favours small municipalities | 89 |
| Making delivery of education more equitable across the country | 95 |

| | |
|--|-----|
| Consolidating the school network would raise quality and efficiency | 96 |
| Improving the quality of teaching by expanding incentives for teachers to work in remote areas | 99 |
| Improving the delivery of health and long-term care for an ageing population | 100 |
| Healthcare outcomes are unequal across the country | 100 |
| Improving access to long-term care services | 105 |
| Annex 1.A. Average tax revenue per capita is higher in small municipalities, 2018 | 112 |

| Executive Summary | 10 |
| 1. Key policy insights | 15 |
| The pandemic caused an economic slump in the first half of 2020 | 23 |
| The government provided a bridge to businesses and households to traverse the crisis | 29 |
| Measures to support employment and income | 29 |
| Measures to support businesses | 30 |
| Government policies are supporting a strong rebound from the slump | 32 |
| Fiscal policy is expansionary in 2020 | 32 |
| Monetary policy is boosting credit supply and keeping interest rates low | 33 |
| Macro prudential policies should be tightened as the economy recovers to contain financial stability risks | 34 |
| The recovery will be gradual and subject to risks | 38 |
| Restoring public finance sustainability | 39 |
| Boosting productivity growth | 44 |
| Fostering the supply of skilled workers | 48 |
| Easing regulatory barriers to competition | 48 |
| Further measures are needed to achieve Finland's GHG emissions abatement objectives | 50 |
| Perceived corruption is low, tax transparency is high but some aspects of anti-money laundering measures need strengthening | 53 |
| Annex A. Finland's early policy response against the COVID-19 | 57 |
| References | 60 |
| 2. Realising the government's objective to increase employment | 63 |
| The employment rate gap between Finland and the Scandinavian Nordics | 66 |
| The employment rate gap for older workers | 69 |
| The employment rate gap for young women | 72 |
| The employment rate gap for youth | 73 |
| Reforms since the turn of the century to increase employment | 74 |
| Tightening access to disability pension and increasing the share of employers subject to experience-rated contributions | 74 |
| Increasing the age of entitlement to extended unemployment benefit | 74 |
| The 2005 and 2017 old-age pension reforms | 76 |
| Boosting activation | 79 |
| Reducing effective tax rates on labour income | 79 |
| The employment package announced in 2019 and revised in the proposed 2021 budget | 80 |
| Increasing the employment of older workers | 81 |
| Early retirement pathways reduce employment of seniors | 81 |
| Phase out the unemployment benefit route to early retirement | 83 |

| | |
|--|-----|
| Align conditions for obtaining disability benefit for older workers with those for other workers | 88 |
| Enhancing current and future older workers' skills | 92 |
| Increasing the employment of mothers with young children | 107 |
| Financial working incentives are weak | 107 |
| Reducing the homecare allowance would improve work incentives | 108 |
| Enhancing access to childcare | 112 |
| References | 116 |

Tables

| | |
|---|----|
| Table 1. Economic recovery will be gradual | 12 |

Figures

| | |
|---|----|
| Figure 1. Economic activity and mobility collapsed, but less than elsewhere | 11 |
| Figure 2. Temporary layoffs spiked | 11 |
| Figure 3. Extended unemployment benefit causes a spike in senior unemployment rates | 12 |
| Figure 1.1. Finland's export intensity is low for a small EU country | 16 |
| Figure 1.2. Finland is not highly integrated in global value chains | 16 |
| Figure 1.3. GDP per capita is lower in Finland than the median of the upper half of OECD countries owing to lower productivity and resource utilisation | 17 |
| Figure 1.4. Finland's tax burden is high | 18 |
| Figure 1.5. On average, Finland performs well on many OECD How's Life Indicators | 18 |
| Figure 1.6. Income inequality has edged up since the beginning of the century | 19 |
| Figure 1.7. Income inequality and relative poverty rates are below the OECD average | 19 |
| Figure 1.8. The gender full-time wage gap is large in Finland | 20 |
| Figure 1.9. Measures have been effective in reducing GHG emissions | 22 |
| Figure 1.10. COVID-19 cases surged in March mainly in the greater Helsinki area | 23 |
| Figure 1.11. Mobility dropped ahead of the state of emergency measures | 24 |
| Figure 1.12. Economic activity collapsed as a result of pandemic | 25 |
| Figure 1.13. Temporary layoffs increased sharply, mostly among middle-income workers | 26 |
| Figure 1.14. Young women and workers in hospitality and retail trade were hardest hit | 27 |
| Figure 1.15. The trend employment rate has turned down but the gains since 2017 have not yet been fully reversed | 28 |
| Figure 1.16. Finland is one of the few countries where paid sick leave fully replaces lost earnings for COVID-19 sickness | 30 |
| Figure 1.17. The number of bankruptcies remains low for the time being | 31 |
| Figure 1.18. The general government budget deficit and gross debt increase substantially in 2020 | 32 |
| Figure 1.19. New loan expanded drastically in the latter half of March 2020 | 34 |
| Figure 1.20. Long-run interest rates are low | 34 |
| Figure 1.21. The banking sector is well capitalised but with structural vulnerabilities | 36 |
| Figure 1.22. Household debt as a share of net household disposable income is above the OECD average | 37 |
| Figure 1.23. Future expenditure increases will be driven by population ageing | 40 |

| | |
|---|-----|
| Figure 1.24. Government debt would increase substantially under unchanged policies | 41 |
| Figure 1.25. Labour productivity growth has been weak | 45 |
| Figure 1.26. Productivity growth slowed within sectors while resource shifted to low productivity sectors | 45 |
| Figure 1.27. The stock of foreign direct investment is smaller than in many other countries | 46 |
| Figure 1.28. Efficiency of resource allocation is lower in Finland than in the Scandinavian Nordics | 47 |
| Figure 1.29. The tertiary education attainment rate is low | 47 |
| Figure 1.30. Regulatory barriers to competition are high in some upstream sectors | 49 |
| Figure 1.31. Union density is high, as is collective bargaining coverage | 50 |
| Figure 1.32. Green growth indicators | 53 |
| Figure 1.33. Perceived corruption is low, tax transparency is high but some anti-money laundering measures need to be strengthened | 54 |
| Figure 2.1. Dashboard of labour market performance for Finland | 65 |
| Figure 2.2. The gap in employment rates between Finland and the Scandinavian Nordics is mostly attributable to older workers | 68 |
| Figure 2.3. Differences in age structure contribute little to the employment rate gap | 69 |
| Figure 2.4. Labour force participation of seniors is lower and unemployment higher than in the Scandinavian Nordics | 70 |
| Figure 2.5. The effective retirement age is lower than in the Scandinavian Nordics | 71 |
| Figure 2.6. Over the past decade, the employment rate gap has fallen for 55-59 year olds, but not for 60-64 year olds | 72 |
| Figure 2.7. Work attendance rates are lower in Finland for mothers of young children | 73 |
| Figure 2.8. Target retirement ages are rising faster than minimum retirement ages | 77 |
| Figure 2.9. The 2017 old-age pension reform is projected to increase the expected effective retirement age | 78 |
| Figure 2.10. Employment protection is stronger in Finland than in the Scandinavian Nordics | 82 |
| Figure 2.11. The maximum duration of unemployed benefit for older workers is long in Finland | 83 |
| Figure 2.12. Increasing the minimum age for extended unemployment benefit pushes back the sharp rise in unemployment rates for older workers in the run-up to benefit eligibility | 84 |
| Figure 2.13. The extended unemployment benefit reduces labour supply | 86 |
| Figure 2.14. Activation policies push older workers towards the unemployment tunnel rather than re-employment | 87 |
| Figure 2.15. The probability of inflow into disability benefits soars at age 60 | 89 |
| Figure 2.16. The rejection rate for disability benefits applicants aged 60 or over is very low | 89 |
| Figure 2.17. The share of 55-64 years olds in poor health declined sharply | 90 |
| Figure 2.18. The number of sickness allowance recipients has declined | 90 |
| Figure 2.19. The labour market has become more polarised, with high-skill replacing mid-skill jobs | 92 |
| Figure 2.20. The intensity of non-routine tasks and ICT skills at work is high | 93 |
| Figure 2.21. Automation risk is low but one quarter of jobs would undergo changes | 94 |
| Figure 2.22. Information processing skills are lower for older than for younger workers | 95 |
| Figure 2.23. The seniority premium in wages is relatively small | 96 |
| Figure 2.24. The effect of the unemployment tunnel is larger in automatable occupations | 96 |
| Figure 2.25. The probability of staying employed declines faster with higher exposure to digital technologies and better access to the unemployment tunnel | 99 |
| Figure 2.26. Participation in lifelong learning is high but some groups lag behind | 100 |
| Figure 2.27. The quality of the working environment is high overall | 106 |
| Figure 2.28. Older job applicants are more disadvantaged in Finland | 107 |
| Figure 2.29. Mothers' financial work incentives are very low in Finland | 108 |
| Figure 2.30. Homecare allowance recipients are mostly women | 109 |
| Figure 2.31. The homecare allowance makes it financially burdensome for mothers to use ECEC | 109 |
| Figure 2.32. Financial incentives for part-time jobs have improved, but there is still room for improvement | 110 |
| Figure 2.33. In-work transitions have a large positive impact on earnings in Finland, but mothers are missing many opportunities | 111 |
| Figure 2.34. Gross earnings of women and men sharply diverge immediately after the birth of their first child, and do not converge fully | 112 |
| Figure 2.35. Participation in early childhood education and care is low in Finland | 113 |
| Figure 2.36. ECEC services are not sufficient to meet parents' needs | 114 |
| | |
| Figure A.1. Finland initiated confinement measures earlier than many other OECD countries | 58 |
| Figure A.2. Stringency of confinement and mobility loss were relatively moderate in Finland | 59 |

| | |
|---|-----------|
| Executive summary | 9 |
| 1 Key policy insights | 14 |
| 1.1. Investing to hasten the recovery and prepare for the challenges ahead | 15 |
| 1.2. Germany has weathered the initial stages of the COVID-19 crisis well, but challenges loom | 19 |
| The economy contracted sharply in 2020 | 19 |
| Bank vulnerabilities should be monitored closely | 27 |
| Reviving business dynamism is crucial for productivity growth | 29 |
| Lowering occupational entry regulations will boost labour market dynamism | 31 |
| Corruption is low, but there is room to improve transparency | 32 |
| 1.3. Updating fiscal policy to enhance wellbeing | 32 |
| Fiscal policy to support the recovery | 32 |
| Greening the tax mix | 37 |
| 1.4. Further progress is needed to overcome the investment backlog | 43 |
| Funding for public investment has stepped up, but more needs to go to municipalities | 44 |
| Policy should actively seek to resolve capacity constraints | 45 |
| Infrastructure governance reforms would yield productivity benefits | 45 |
| Enabling the energy transition through network reforms | 47 |
| 1.5. Germany leads the OECD in recycling, but also generates much waste | 47 |
| 1.6. An inclusive and flexible labour market is crucial during the recovery | 49 |
| The tax and benefit system should be better designed to encourage moving to jobs with higher earnings | 50 |
| Housing policy reforms can support labour mobility, inclusion and decarbonisation | 53 |
| The high share of part-time work among women contributes to a large gender wage gap | 55 |
| Family and care policies are on the right track but equal sharing still has some way to go | 57 |
| Women are still a minority in management positions | 58 |
| References | 61 |
| 2 Unleashing the benefits of digital transformation | 71 |
| 2.1. Boosting productivity and improving policy coherence | 72 |
| 2.2. Addressing connectivity bottlenecks and increasing quality of service | 74 |
| Expand fixed networks and increase their quality | 74 |
| Increase mobile network coverage and quality | 78 |
| 2.3. Strengthening foundations for firms' digital transformation | 81 |
| Foster firms' adoption of ICT tools and activities needed to create value with data | 82 |
| Strengthen the automotive industry's capacity for data-driven innovation | 87 |
| 2.4. Overcoming key barriers to firms' successful digital transformation | 90 |
| Boost investment in knowledge-based capital | 90 |
| Step up support to accelerate the digital transformation of SMEs | 92 |
| Promote digital security risk management more strategically | 94 |

| | |
|---|-----|
| 2.5. Supporting business dynamism during the recovery to boost technology diffusion | 95 |
| Improve access to start-up and growth finance | 97 |
| Reduce remaining bureaucratic burdens | 98 |
| Accelerate progress towards digital government | 99 |
| 2.6. Improving skills to thrive in the digital age | 102 |
| Foundational numeracy and literacy skills are in high demand | 102 |
| Prioritise early education and strengthen the foundational skills of VET graduates | 103 |
| Complement greater use of ICTs in schools with more ICT training for teachers | 105 |
| Computational and programming skills need to improve, notably among women | 106 |
| Increasing opportunities to study STEM and ICT-related fields | 107 |
| Encourage low-skilled individuals to take part in adult education | 110 |
| Reap the potential of online education as a universal learning tool | 111 |
| References | 113 |

| Table 2.1. Firms with higher speed broadband are more likely to adopt other ICT tools and activities | 81 |
| Table 2.2. ICT specialists are essential for firms' adoption of key ICT tools and activities | 108 |

Figures

| | |
|--|----|
| Figure 1. Increases in unemployment were cushioned by short-time work | 10 |
| Figure 2. Public investment has recovered, but net municipal investment is still negative | 11 |
| Figure 3. GHG emissions per capita are high compared with other European countries | 11 |
| Figure 4. German firms lag in the adoption of advanced ICT tools and activities | 12 |
| Figure 1.1. Wellbeing is generally high | 16 |
| Figure 1.2. Income inequality has largely stabilised, and is below the OECD average | 17 |
| Figure 1.3. Greenhouse gas emissions per capita are high compared with other European countries | 17 |
| Figure 1.4. Carbon intensity and air pollution have improved | 18 |
| Figure 1.5. Coronavirus cases in the first wave were brought under control with moderate restrictions on mobility | 19 |
| Figure 1.6. The COVID-19 crisis triggered a substantial economic contraction | 20 |
| Figure 1.7. Unemployment has increased and wage pressures are muted | 23 |
| Figure 1.8. Job losses and recourse to short-time work vary across sectors | 24 |
| Figure 1.9. Manufactured capital goods dominate exports, with Europe the major destination | 25 |
| Figure 1.10. Weak and uncertain demand in the wake of COVID-19 | 26 |
| Figure 1.11. Germany relies heavily on foreign demand | 27 |
| Figure 1.12. Credit grew faster than output before the crisis and banks have medium to high leverage | 28 |
| Figure 1.13. Productivity growth has slowed, with little capital deepening | 30 |
| Figure 1.14. A high share of occupations are subject to licensing and certification | 31 |
| Figure 1.15. Perceived risks of corruption are low | 33 |
| Figure 1.16. The pace of future consolidation will need to be carefully managed | 35 |
| Figure 1.17. Environment-related taxes are low and less than one fifth of emissions were subject to substantive carbon pricing in 2015 | 38 |

| | |
|---|-----|
| Figure 1.18. Renewable power generation has expanded substantially | 39 |
| Figure 1.19. Transport emissions have not fallen as much as those from other sectors | 40 |
| Figure 1.20. Passenger cars | 41 |
| Figure 1.21. Public investment has picked up, but net municipal investment is still negative | 43 |
| Figure 1.22. Public investment is low | 44 |
| Figure 1.23. The quality of infrastructures is fairly high | 46 |
| Figure 1.24. A lot of recycling, but also much waste | 48 |
| Figure 1.25. Share of low-wage earners, women and youth is high in some affected sectors | 50 |
| Figure 1.26. The transfer and benefit system creates weak incentives to expand working hours | 51 |
| Figure 1.27. Housing supply is not very responsive to prices | 53 |
| Figure 1.28. The social housing stock is low and targeting could be improved | 54 |
| Figure 1.29. The gender pay gap for full-time employees has changed little in the last decade | 58 |
| Figure 1.30. Women, particularly mothers, often work part-time | 57 |
| Figure 1.31. The paternal share of parental leave exceeds the OECD average | 58 |
| Figure 1.32. Women are under-represented in managerial positions | 59 |
| Figure 2.1. Digital-intensive sectors contributed significantly to recent growth in value added | 72 |
| Figure 2.2. Germany has a low share of Internet subscriptions in higher speed tiers | 74 |
| Figure 2.3. The share of fibre is low and has increased only slowly in Germany | 75 |
| Figure 2.4. Germany faces an urban-rural divide for Internet subscriptions above 30 Mbps | 75 |
| Figure 2.5. Germany has a concentrated fixed broadband market | 77 |
| Figure 2.6. German mobile broadband subscribers consume less data than the OECD average | 79 |
| Figure 2.7. Germany has fallen behind peer countries on mobile download connection speeds | 79 |
| Figure 2.8. German firms lag in the adoption of advanced ICT tools and activities | 82 |
| Figure 2.9. Firms in small and remote places lag furthest on advanced ICT tools and activities | 84 |
| Figure 2.10. Data from firms' sensors and devices remains underused for big data analysis | 85 |
| Figure 2.11. Germany lags behind top economies in ICT-related patenting | 88 |
| Figure 2.12. Investment in ICTs and knowledge-based capital is low | 91 |
| Figure 2.13. Small firms are not yet catching up in the adoption of advanced ICT tools and activities | 93 |
| Figure 2.14. Despite strong technical measures, digital security risk assessment remains weak | 95 |
| Figure 2.15. Business dynamism was slowing down long before the COVID-19 crisis | 96 |
| Figure 2.16. Policies supporting business dynamism, technology diffusion and productivity | 97 |
| Figure 2.17. Much potential remains for seed and later stage venture capital investments | 97 |
| Figure 2.18. Administrative burdens for limited liability companies and personally owned enterprises are high | 99 |
| Figure 2.19. Germany lags behind on digital government | 100 |
| Figure 2.20. Public services for businesses are not always available online and across borders | 101 |
| Figure 2.21. Returns to foundational skills are large | 103 |
| Figure 2.22. While foundational skills are best acquired early, primary education spending is low | 104 |
| Figure 2.23. Germany lags on use of ICT tools in schools and teachers' preparedness | 105 |
| Figure 2.24. A low share of young adults are able to program | 106 |
| Figure 2.25. Significant shortages exist in STEM related knowledge domains | 107 |
| Figure 2.26. The share of STEM graduates lags behind leading countries | 109 |

| | |
|--|-----|
| Executive Summary | 9 |
| 1 Key Policy Insights | 14 |
| Ensuring continued convergence with higher living standards | 14 |
| The economy requires continued policy support | 20 |
| The economy weakened substantially | 20 |
| A comprehensive fiscal package has cushioned the initial crisis impact | 21 |
| Monetary policy has been appropriately accommodative | 26 |
| Risks to financial stability have increased and require close monitoring | 28 |
| Boosting the recovery while containing medium-term spending pressures | 30 |
| The crisis legacy will compound long-term challenges | 30 |
| Ageing will put significant pressures on the quality of pension, health and long-term care | 33 |
| Improving the tax system | 37 |
| Illustrating the fiscal effects of government's and OECD-recommended reforms | 40 |
| Improving productivity, employment and well-being | 41 |
| Enhancing labour market inclusiveness | 41 |
| Greening growth is essential for well-being | 52 |
| Preventing corruption and economic crimes | 55 |
| References | 58 |
| Annex A. Progress on structural reforms | 62 |
| 2 Boosting SMEs' internationalisation | 63 |
| Poland's internationalisation has been remarkable but unequal | 64 |
| A bird's eye view of Poland's internationalisation and SMEs' landscape | 68 |
| Polish exports concentrate on medium and low-tech goods | 68 |
| Small size and low productivity hinder SME internationalisation | 71 |
| Boosting SMEs' internationalisation through a better business environment | 76 |
| Easing further administrative costs for potential exporters | 76 |
| Easing tax compliance and ensuring sound public support for SMEs | 79 |
| Increasing SMEs' innovation, its diffusion and productivity | 82 |
| Trade facilitation has improved | 83 |
| Developing local clusters and SMEs' consortia could boost internationalisation | 84 |
| Increasing skills to foster integration in global value chains | 87 |
| Raising skills through better life-long training | 87 |
| Supporting better management skills for SMEs | 92 |
| Facilitating the immigration of skilled workers | 93 |
| Harnessing the benefits of digitalisation to support SMEs' exports | 94 |
| Developing high-quality digital infrastructure | 96 |
| Preparing SMEs for the digital transition | 99 |
| Encouraging the use of ICTs by SMEs | 101 |
| Improving transport infrastructure to boost internationalisation | 105 |
| The capacity and quality of transport infrastructure need to be enhanced | 105 |
| Maintenance and upgrading investments are needed to improve the quality of infrastructure | 107 |
| Investment in transport should better reflect environmental concerns | 108 |
| Developing multi-modal transport links to improve logistics' performance | 109 |
| Improving the governance of infrastructure | 110 |
| Supporting the tourism sector and its more equal regional development | 110 |
| References | 114 |

Tables

| | |
|--|-----|
| Table 1. The recovery remains uncertain | 10 |
| Table 1.1. Macroeconomic indicators and projections | 22 |
| Table 1.2. Low-probability events that could lead to major changes in the outlook | 24 |
| Table 1.3. Government structural fiscal plans from 2018 to 2025 and OECD's recommendations | 40 |
| Table 1.4. Past OECD recommendations on fiscal policy and pensions | 41 |
| Table 1.5. Potential impact of some reforms proposed in this Survey on GDP | 44 |
| Table 1.6. Past OECD recommendations on labour market and migration policies | 51 |
| Table 1.7. Past OECD recommendations on environmental policies | 55 |
| Table 2.1. Tourism is concentrated in a few destinations | 111 |

Figures

| | |
|---|----|
| Figure 1. The long-term expansion stalled | 10 |
| Figure 2. The SMEs productivity gap is wide | 11 |
| Figure 3. Exposure to air pollution remains widespread | 12 |
| Figure 4. Demographic pressures are high | 12 |
| Figure 1.1. The catch-up with living standards in other OECD countries has continued | 14 |
| Figure 1.2. Poverty had fallen until the onset of the crisis | 15 |
| Figure 1.3. The COVID-19 crisis has dented economic prospects | 15 |
| Figure 1.4. The impact of population ageing is already visible | 16 |
| Figure 1.5. Regional disparities are high | 17 |
| Figure 1.6. The crisis could widen inequalities | 17 |
| Figure 1.7. New COVID-19 cases have increased rapidly over the autumn | 20 |
| Figure 1.8. Activity had bounced back after the initial Covid-19 sudden stop | 21 |
| Figure 1.9. Labour market adjustments are significant | 23 |
| Figure 1.10. Exchange rate variations have been limited and export performance has so far been robust | 24 |
| Figure 1.11. Poland's export structure is well diversified | 26 |
| Figure 1.12. Monetary policy has reacted forcefully to the crisis | 27 |
| Figure 1.13. Inflationary pressures have decreased | 27 |
| Figure 1.14. Evolution of macro-financial vulnerabilities | 28 |
| Figure 1.15. The risk of a credit crunch has increased | 29 |
| Figure 1.16. Banking sector's profitability and holding of sovereign bonds | 30 |
| Figure 1.17. The fiscal response to the crisis has been substantial | 31 |
| Figure 1.18. Spending commitments on some social programmes are rapidly increasing | 32 |
| Figure 1.19. Ageing will put further pressure on public debt | 32 |
| Figure 1.20. A steep decline in replacement rates is set to contain pension expenditures | 34 |
| Figure 1.21. Old-age work is low and declining | 35 |
| Figure 1.22. The health sector suffers from numerous weaknesses | 36 |
| Figure 1.23. Tax revenues are around the OECD average, but could be more redistributive | 38 |
| Figure 1.24. Tax-based carbon price signals are weak | 39 |
| Figure 1.25. Upskilling and automation are challenging issues | 42 |
| Figure 1.26. Educational outcomes have improved rapidly but there are significant skill gaps | 43 |
| Figure 1.27. Urban sprawl could reinforce employment access issues | 45 |
| Figure 1.28. Temporary contracts tend not to be a stepping-stone for career development | 47 |
| Figure 1.29. The minimum wage could increase substantially | 48 |
| Figure 1.30. The employment rate of women with young children has stagnated | 49 |
| Figure 1.31. The use of formal childcare is improving | 50 |
| Figure 1.32. Poland's energy and carbon intensities have declined but remain elevated | 52 |
| Figure 1.33. Significant investments are needed in the electricity sector | 53 |
| Figure 1.34. Air pollution levels are high and result in a high number of premature deaths | 54 |
| Figure 1.35. There is room to further limit the risks of corruption | 55 |
| Figure 2.1. Poland's internationalisation and export performance have been impressive | 64 |
| Figure 2.2. SMEs play a key role in the Economy | 65 |
| Figure 2.3. SMEs internationalisation has been heterogeneous | 66 |
| Figure 2.4. SMEs have been hard hit by the coronavirus crisis | 67 |
| Figure 2.5. Polish exports have been robust, and well diversified | 68 |

| | |
|---|-----|
| Figure 2.6. The structure of Polish exports | 69 |
| Figure 2.7. Foreign multinationals and exports are tightly linked | 70 |
| Figure 2.8. Poland is specialised in low- and medium-tech exports | 71 |
| Figure 2.9. Smaller firms have low export intensity in manufacturing and services sectors | 73 |
| Figure 2.10. Micro-firms lag multiple forms of internationalisation | 74 |
| Figure 2.11. SMEs productivity is weak and young firms lack opportunities to grow | 75 |
| Figure 2.12. Micro-firms account for a high share of employment | 75 |
| Figure 2.13. SMEs' gaps have significant economic and social consequences | 76 |
| Figure 2.14. Selected features of the OECD product market regulation indicators | 77 |
| Figure 2.15. Some administrative procedures remain burdensome | 78 |
| Figure 2.16. Some services trade barriers remain important | 78 |
| Figure 2.17. Tax compliance costs remain elevated | 79 |
| Figure 2.18. Business and SMEs' support are heavily reliant on EU funds | 80 |
| Figure 2.19. SMEs lag R&D investment and innovation | 82 |
| Figure 2.20. Strengthening firms' cooperative linkages and clusters could support SMEs | 84 |
| Figure 2.21. The share of high-skilled adults and their contribution to GVCs is low | 88 |
| Figure 2.22. Shortages of skilled staff, demographic ageing and automation remain major issues | 89 |
| Figure 2.23. Training is low and insufficiently targeted, 2016 | 90 |
| Figure 2.24. Public funding for training is low and small firms provide low access to training | 92 |
| Figure 2.25. Management skills appear lagging, notably for domestic firms | 93 |
| Figure 2.26. Poland's digital transition has been relatively lagging | 95 |
| Figure 2.27. SMEs lag in the adoption of more sophisticated digital technologies | 96 |
| Figure 2.28. Barriers to the deployment of digital infrastructure are elevated | 97 |
| Figure 2.29. The quality of Poland's digital network needs to improve further | 98 |
| Figure 2.30. Participation in e-commerce is low | 100 |
| Figure 2.31. SMEs' e-commerce export participation is low | 100 |
| Figure 2.32. Awareness of digital security by SMEs is weak | 102 |
| Figure 2.33. Poles lack advanced digital skills | 103 |
| Figure 2.34. Polish SMEs offer too little ICT training | 104 |
| Figure 2.35. There is room to improve trade logistics | 105 |
| Figure 2.36. Investment in transport infrastructure is sizeable, but regional disparities in infrastructure are large | 106 |
| Figure 2.37. Increasing road maintenance spending would be a good move | 107 |
| Figure 2.38. Rail freight transport needs a boost | 108 |
| Figure 2.39. Airport traffic expanded fast before the coronavirus crisis | 109 |
| Figure 2.40. International tourism was lagging before the coronavirus crisis | 112 |
