Executive summary	9
1 Key policy insights	14
Recent macroeconomic developments and short-term prospects	19
Avoiding hysteresis effects on inequality after the outbreak and building a stronger middle class	31
Closing productivity gaps to make mid-size firms thriving and support the recovery	47
Continuing to decouple economic growth from environmental impacts	58
References	61
2 Making digital transformation work for all in Chile	63
Promote connectivity and close the digital divide	65
Unlocking digital skills development and innovation capacity	72
Boosting business dynamism and the diffusion of knowledge in the digital era	84
Preserving social cohesion and helping workers make the most out of a dynamic labour market	96
Achieving sustainable and reliable digital infrastructures	111
References	117
Tables	
Table 1. Chile is set for a gradual recovery	10
Table 1.1. Macroeconomic indicators and projections	25
Table 1.2. Events that could lead to major changes in the outlook	27
Table 1.3. The structural budget deficit was stable until recently	29
Table 1.4. Past OECD recommendations on macroeconomic policies	31
Table 1.5. Past OECD recommendations on inclusive growth	46
Table 1.6. Past OECD recommendations on productivity	55
Table 1.7. Illustrative GDP-per-capita impact of recommended reforms	57
Table 1.8. Illustrative fiscal impact of recommended reforms	57
Figures	
Figure 1. Progress in poverty reduction has been impressive but inequality remains high	10
Figure 2. The outbreak may reinforce the already high share of vulnerable households	11
Figure 3. The tax and transfer system could do more to reduce inequality	12
Figure 4. Competitive pressures remain low	12
Figure 1.1. Growth, inclusiveness and well-being outcomes in Chile	16
Figure 1.2. Growth started to decelerate before the outbreak	20
Figure 1.3. The labour market has been significantly hit	21
Figure 1.4. Inflation is on target and expectations remain anchored	22
Figure 1.5. The current account has moved into surplus during the pandemic	23
Figure 1.6. Financial conditions stay favourable	24

Figure 1.7. The concentration of specialised exports to China and the United States is a risk to growth	27
Figure 1.8. Monetary policy is accommodative	28
Figure 1.9. Illustrative public debt paths	30
Figure 1.10. Social mobility is low in Chile	32
Figure 1.11. Economic vulnerability is high while income is concentrated at the top	33
Figure 1.12. Core spending falls disproportionately on the poorest sections of the population	34
Figure 1.13. Quality and inclusiveness of education are low	35
Figure 1.14. Spending in pre-primary, primary and secondary education is lagging behind	36
Figure 1.15. Enrolment in early childhood education has increased but quality remains low	37
Figure 1.16. Duality and informality remain high	38
Figure 1.17. Training programmes do not reach the most vulnerable	40
Figure 1.18. The tax and transfer system could provide more protection for vulnerable households	41
Figure 1.19. The personal income tax structure has little redistributive power	42
Figure 1.20. Illustrative income redistribution effects of selected tax reforms	44
Figure 1.21. Chile has the one of the highest gap in health status between education groups	45
Figure 1.22. Out-of-pocket spending for health care are amongst the highest in the OECD	45
Figure 1.23. Productivity is low and polarised	48
Figure 1.24. Competitive pressures remain low	49
Figure 1.25. The complexity of some regulations remains the highest in the OECD	50
Figure 1.26. The impact of new regulations should be systematically assessed	52
Figure 1.27. The insolvency regime can be eased further	53
Figure 1.28. Corruption remains low	54
Figure 1.29. Green growth indicators	59
Figure 2.1. Increasing access to fixed broadband and reducing the regional disparities are the main challenges	66
Figure 2.2. Regulatory barriers on communications are high	68
Figure 2.3. There are wide disparities in Internet use	70
Figure 2.4. Access to Internet at home is widely determined by socio-economic variables	71
Figure 2.5. Digital adoption lags behind mainly in micro firms	72
Figure 2.6. Chilean workers lack the skills to thrive in the digital era	73
Figure 2.7. Training teachers to be drivers of digital transformation should be a priority	75
Figure 2.8. Risks of digital transformation and extreme use of Internet should be avoided	76
Figure 2.9. ICT skills are increasingly demanded in Chile	77
Figure 2.10. Chile is experiencing a clear shortage of ICT workers	78
Figure 2.11. Bridging the innovation divide is necessary to increase productivity	80
Figure 2.12. R&D and innovation spending remains low	81
Figure 2.13. Public support for innovation has increased but remains limited	82
Figure 2.14. Business collaboration should be strengthened	83
Figure 2.15. The diffusion of digital tools needs a boost	85
Figure 2.16. Digital adoption leads to higher firm level productivity	86
Figure 2.17. E-commerce in Chile has been growing at a fast pace	87
Figure 2.18. Competitive pressures remain low and the regulatory burden is high	89
Figure 2.19. Chile has room to increase the number of Fintech start-ups	92
Figure 2.20. The development of venture capital has stalled in Chile	92
Figure 2.21. Digital Services Trade Restrictiveness is high	94
Figure 2.22. The interoperability of national regulatory frameworks with the region could improve	95
Figure 2.23. Employment in digital-intensive sectors remains low in Chile	97
Figure 2.24. The Chilean labour market shows signs of polarisation	98
Figure 2.25. More than half of jobs are at risk of automation, affecting more low and middle-classes	99
Figure 2.26. Employment in routine manual occupations and those with high risk of automation has decreased in the last decade	100
Figure 2.27. Automation risk and labour market transitions in Chile	101
Figure 2.28. Artificial intelligence and labour market transitions in Chile	101
Figure 2.29. Automation risk leads to lower wages for the low-income, but artificial intelligence has a positive impact	102
Figure 2.30. Online platforms have increased at a fast pace in Chile	103
Figure 2.31. Self-employment, temporary and informal jobs are prevalent in Chile	104
Figure 2.32. Participation in training is high in Chile	108
Figure 2.33. Most vulnerable workers receive less training	109
Figure 2.34. The uptake of digital government services remains low	112

Figure 2.35. Cybersecurity capacities are lacking	113
Figure 2.36. Data privacy violations are the highest in the OECD	114

Boxes

Box 1.1. Policy responses to the COVID-19 pandemic	17
Box 1.2. Key features of the social agenda in response to October 2019 protests	19
Box 1.3. How does a negative income tax work? The example of the Earned Income Tax Credit in the United States	43
Box 1.4. Illustrative impacts of a more inclusive tax system on income inequality	43
Box 1.5. The Zero Licensing Initiative in Portugal	51
Box 1.6. Potential impact of structural reforms on per capita GDP	57
Box 1.7. Quantifying the fiscal impact of structural reforms	57
Box 2.1. Ongoing projects to extend fibre cables throughout Chile	67
Box 2.2. The divide in household internet usage in Chile	71
Box 2.3. Digitalisation is already having a positive impact on Chilean firms' productivity	86
Box 2.4. Is the impact of digital technologies already visible in the Chilean labour market?	100
Box 2.5. The impact of digital transformation on wages in Chile	102
