Foreword	3
Executive summary	9
1 Key policy insights	14
The COVID-19 pandemic has dragged down the economy	15
Investments for sustainable growth	28
Skills and labour market reforms to build social capital	43
References	62
2 Productivity and digitalisation for a stronger recovery after COVID-19	67
Supporting an inclusive and efficient digital transformation	69
Boosting skills to realise digital complementarities	87
References	98

FIGURES

Figure 1. The economy contracted less than elsewhere	10
Figure 2. The budget deficit and public debt have increased substantially	11
Figure 3. Emission reduction targets call for additional policies	11
Figure 4. Women spend less time in paid work than men	12
Figure 5. Employment in some hard-hit sectors is vulnerable to automation	12
Figure 6. Small firms lag behind in adopting digital technologies	12
Figure 1.1. Recent COVID-19 developments in the Netherlands	16
Figure 1.2. The economy contracted less than elsewhere	17
Figure 1.3. Investment is recovering, reflecting improving confidence	19
Figure 1.4. Unemployment has fallen back somewhat after the first COVID-19 wave	20
Figure 1.5. House prices continue to rise	20
Figure 1.6. Exports of goods by commodity and destination	21
Figure 1.7. The budget deficit and public debt have increased substantially	23
Figure 1.8. Future expenditure increases will be driven by population ageing	24
Figure 1.9. Illustrative public debt trajectories	25
Figure 1.10. Financial stability indicators are in the mid-range of other OECD countries	27
Figure 1.11. Weak investments have contributed to lacklustre labour productivity growth	28
Figure 1.12. Maximum grant under the Recovery and Resilience Facility	31
Figure 1.13. Dutch households hold high assets and high debt on average	33
Figure 1.14. Home-ownership tax bias continues after housing tax reform	34
Figure 1.15. The home-ownership gap between high and low income households is large	35
Figure 1.16. The private rental market is underdeveloped	36
Figure 1.17. Air quality only improved temporarily during the pandemic	38
Figure 1.18. The Netherlands is not yet on track to meet its medium term emission targets	41
Figure 1.19. Environmental taxes are high and resource efficiency has improved	43

Figure 1.20. Trust in people and government are high	44
Figure 1.21. Corruption is low	45
Figure 1.22. Regular workers are highly protected, while temporary workers are not	46
Figure 1.23. The share of flexible workers has increased over the past decade	46
Figure 1.24. The self-employed pay less pension and social security contributions	47
Figure 1.25. Old-age poverty is low	50
Figure 1.26. Some hard-hit sectors are also exposed to automation pressures	52
Figure 1.27. PISA performance is high but declining, and the weakest fall further behind	54
Figure 1.28. School closures and reduced activity can hold back human capital accumulation	55
Figure 1.29. Unequal sharing of family work lead to gender gaps in pensions and income	56
Figure 1.30. Relatively short maternity leave is set to increase	57
Figure 2.1. Labour productivity is high while productivity growth is slow	68
Figure 2.2. The Netherlands is more digitalised than the OECD average	70
Figure 2.3. A range of policies can support productivity through digital adoption in the Netherlands	71
Figure 2.4. Teleworking was common already before COVID-19	72
Figure 2.5. Most firms have a broadband connection but the uptake of high-speed internet is low	73
Figure 2.6. Streamlining regulations could boost digital technology adoption and productivity	75
Figure 2.7. Administrative burden on start-ups was high before the COVID-19 crisis	76
Figure 2.8. A large share of employment and value added come from small and medium firms	78
Figure 2.9. Adoption of digital technologies is increasing but small firms lag behind	79
Figure 2.10. The productivity gap has widened in the Netherlands	80
Figure 2.11. Digital adoption and intangibles lead to higher labour productivity growth	81
Figure 2.12. Few Dutch small and medium enterprises make use of equity finance	82
Figure 2.13. Reliance on venture capital is relatively low	84
Figure 2.14. Investment in ICT and software is high, but R&D investment remains low	86
Figure 2.15. Small firms receive less direct R&D funding, but R&D tax incentives are generous	87
Figure 2.16. The Dutch labour market shows signs of polarisation	89
Figure 2.17. Labour market policy spending is relatively high, while spending on training is relatively low	90
Figure 2.18. Adults' skills for the digital economy are high	92
Figure 2.19. Small firms provide less ICT training than larger ones	93
Figure 2.20. Shortages of ICT specialists are pressing	94
Figure 2.21. The Netherlands is experiencing a shortage of ICT graduates	95

Executive summary	9
1 Key Policy Insights	14
Leaving the crisis behind	14
The severe pandemic is countered by strong health measures	17
Economic prospects are improving	21
Growth is accelerating	30
Monetary policy has become more supportive	33
Financial risks require monitoring	35
Embracing innovation in the financial sector	38
Adopting a forward-looking and greener fiscal policy	39
Fiscal policy will remain supportive over the near term	39
Steps to address long-term fiscal challenges will be needed	42
Promoting more environmentally sustainable growth	44
Stronger domestic business dynamism is crucial for higher productivity growth	52
Corruption and lack of public integrity hamper business dynamism	56
An inclusive and mobile labour market is key for sustained growth	59
Improving geographical labour mobility	59
Strengthening female labour force participation	62
References	67
2 Fostering productivity for a stronger and sustained recovery	76
Low productivity undermines income convergence and future living standards	77
Support skills and mobility to raise labour productivity and facilitate structural change	79
Equip students with the skills demanded in the labour market	79
Improve labour mobility	86
Ensure a prudent minimum wage policy to support mobility	91
Promote dynamic and competitive product markets	92
Ease market entry and exit in service and network industries	93
Strengthen the competition framework	95
Embrace e-government solutions for business and public procurement	98
Strengthen equity-based funding	99
Improve the quality of local infrastructure	103
Promote digital adoption	104
References	112

Figures

Figure 1. Fiscal policy has been supportive	10
Figure 2. Environmental concerns remain	11
Figure 3. Productivity growth has been low	12
Figure 4. Low adoption of advanced ICT	12
Figure 1.1. The COVID-19 pandemic had severe health and economic impacts	14
Figure 1.2. Income convergence has gathered pace	16
Figure 1.3. Violence against women has increased during the pandemic	16
Figure 1.4. The healthcare situation worsened in the second and third waves of the pandemic	18
Figure 1.5. High bed capacity was not matched by similar intensive care capacities	20
Figure 1.6. Capacity reallocation may increase mortality from other causes in the future	21
Figure 1.7. Economy activity contracted sharply in 2020	22
Figure 1.8. Better-targeted measures in the second wave moderated the economic decline, with tourism as a notable exception	22
Figure 1.9. Government support averted bankruptcies	23
Figure 1.10. Production and confidence continue to recover	24
Figure 1.11. Employment growth was driven by the expansion of large firms	25
Figure 1.12. The labour market weakened temporarily as the pandemic spread	26
Figure 1.13. The short-time work scheme provided a relatively low replacement rate	27
Figure 1.14. Unemployment of young and low-skilled workers increased before coming down again	28
Figure 1.15. Wage growth outpaces productivity improvements	28
Figure 1.16. The labour tax wedge remains high despite lower social security contributions	29
Figure 1.17. Wage and inflation pressures remain high	30
Figure 1.18. Supply chain disruptions are slowing down the recovery of the automotive sector	32
Figure 1.19. Automotive products dominate exports	33
Figure 1.20. Monetary policy remains accommodative despite inflationary pressures	34
Figure 1.21. Bank lending is strong and the share of non-performing loans has fallen	36
Figure 1.22. Banks' low profitability and high operating costs remain a concern	37
Figure 1.23. EU funds support many activities	41
Figure 1.24. Spending pressures related to population ageing need to be addressed	43
Figure 1.25. Green growth indicators have mostly improved	45
Figure 1.26. Carbon pricing score	46
Figure 1.27. An aging car fleet is increasingly based on diesel	47
Figure 1.28. Landfill taxes are low	50
Figure 1.29. Tariffs for water and wastewater services are low	51
Figure 1.30. Strong investment drove productivity growth before the crisis	53
Figure 1.31. Business dynamics are low	53
Figure 1.32. The insolvency regime is stringent	54
Figure 1.33. Occupational entry barriers remain high	55

Figure 1.34. Corruption is perceived as high compared with other OECD countries	57
Figure 1.35. Anti-money laundering measures should be enhanced	58
Figure 1.36. Regional differences in employment and unemployment are large	60
Figure 1.37. The minimum wage is relatively high	61
Figure 1.38. Housing supply adjusts relatively slowly	62
Figure 1.39. Nursery enrolment remains low	63
Figure 1.40. The gender pay gap is high for women in their 30s and 40s	64
Figure 1.41. Women's work-life balance hampers their career prospects	64
Figure 2.1. Labour productivity remains low	77
Figure 2.2. The productivity gap between foreign and domestic enterprises is large	78
Figure 2.3. Employment rates of VET graduates are high but few work in high-skill jobs	80
Figure 2.4. Higher education graduates have relatively high skills and wages	83
Figure 2.5. Labour turnover is low	86
Figure 2.6. High unemployment in poorer regions contrasts with labour shortages in richer regions	87
Figure 2.7. The rental market is small	88
Figure 2.8. Labour market policy spending on training and job placements is low	91
Figure 2.9. The minimum wage has grown more strongly than the average wage	92
Figure 2.10. There is scope to ease market entry and exit	93
Figure 2.11. The competition authority's budget is low and its caseload is high	96
Figure 2.12. Stakeholder consultation in formulating regulations could be improved	97
Figure 2.13. Competition in public procurement is low	99
Figure 2.14. Government loans schemes remain abundant	100
Figure 2.15. Venture capital funds for company expansion remain low	102
Figure 2.16. There are large regional disparities in road infrastructure	103
Figure 2.17. Hungary is less digitalised than most other OECD countries	106
Figure 2.18. Mobile broadband prices remain relatively high	107
Figure 2.19. High-speed broadband uptake among businesses is relatively low	108
Figure 2.20. Adoption of digital technologies lags behind	108
Figure 2.21. Streamlining regulations could boost digital technology adoption and productivity	109
Figure 2.22. Restrictions to trade in digital services are relatively high	110

Executive summary	8
1 Key policy insights	13
The economy is recovering	15
Monetary policy has been eased in response to the Covid-19 crisis	21
The financial system is considered to be sound but vigilance is warranted	23
Fiscal policy is supporting the economy	26
Policies to increase productivity and employment	33
References	42
2 Fostering innovation for the digital era	44
Iceland has scope to become more innovative and productive	45
Improving R&D support for businesses	49
Encouraging firms to adopt advanced technologies	55
Developing digital government	64
Relevant skills are needed to foster innovation in the digital era	66
Enhancing knowledge transfer to strengthen innovation	74
References	80
3 Addressing climate change	86
Iceland's impact on the world climate	87
The government's climate policies	89
Pricing carbon can help reach climate targets in a cost-efficient manner	90
Easing the transition towards a low-carbon economy	97
Garnering political support for low-carbon policies	101
Low-carbon policies in individual sectors	102
References	108

FIGURES

Figure 1. The economy plunged	9
Figure 2. Border restrictions hit the tourism sector hard	9
Figure 3. Barriers to entry are high	10
Figure 4. Innovation lags behind	11
Figure 5. PISA scores have trended down	11
Figure 6. Carbon emissions exceed the OECD average	11
Figure 1.1. The pandemic hit Iceland mildly	13
Figure 1.2. The economy suffered a large contraction, but policy support helped	14
Figure 1.3. Iceland's economy is highly egalitarian	15
Figure 1.4. The economy is recovering	16
Figure 1.5. The labour market is stabilising	18
Figure 1.6. External positions have weakened	19
Figure 1.7. Services other than tourism are getting more important	20
Figure 1.8. Foreign tourism collapsed, while domestic travel compensated a bit	21
Figure 1.9. Monetary policy remains accommodative	22
Figure 1.10. Households benefitted more than firms from the easing of monetary conditions	24
Figure 1.11. The banking sector appears sound	25

Figure 1.12. Fiscal policy is supporting the economy	27

Executive summary	8
1 Key policy insights	13
COVID-19 has hit the economy hard	13
Vaccines bring hope for a gradual return to normality	14
Growth is picking up but uncertainty remains high	16
Extensive policy support has mitigated the impact of the crisis	19
Public finances are robust but debt will rise with population ageing	21
Monetary and financial policy has buttressed the financial system	23
Some financial vulnerabilities remain	26
Weak money laundering controls have been an issue in some banks' foreign subsidiaries	29
Facilitating resource reallocation is essential for the recovery	31
Education policy measures are starting to bear fruit but challenges remain	35
Structural reforms could boost long-term growth	36
Wider diffusion of digitalisation would boost productivity	42
The green economy offers new growth opportunities	46
References	52
2 Keeping regional inequality in check	55
Regional inequalities are increasing albeit from a low level	57
Sweden is among the most decentralised OECD countries	61
The equalisation system compensates most differences in tax capacity and costs	64
Regions and municipalities face diverse challenges	68
The central government is increasing its support to municipalities and regions	73
Digitalisation offers opportunities to enhance public service delivery	75
Promoting regional growth and employment is essential	78
Recommendations to contain the rise in regional inequality	85
References	86
