Foreword	3
Executive summary	9
1 Key Policy Insights	14
The recovery continues but is subject to high uncertainty	15
The pandemic strained the health system	17
Economic prospects remain good despite elevated risks	20
Monetary conditions remain accommodative	29
A deeper capital market can support digitalisation	30
Financial innovation remains low	32
Adopting a forward-looking fiscal policy	33
Fiscal policy is becoming pro-cyclical	33
Long-term fiscal challenges need to be addressed	41
Pension reforms are needed to secure fiscal sustainability	43
Preparing the health and long-term care systems for ageing-related challenges	45
Promoting more environmentally sustainable growth	46
The main emitters of greenhouse gas emissions are the transport and energy sectors	48
Effective carbon taxes vary across sectors and activities	50 51
Emission reduction incentives in passenger transport have weakened Regulation could be supported by economic instruments	53
Stronger business dynamics is crucial for productivity growth	55
State-ownership holds back business dynamism	57
Corruption and lack of public integrity dampen business dynamics	61
Labour reallocation is key for productivity growth and inclusion	66
References	72
2 Digitalising the Economy	80
Supporting a coherent and efficient digital transformation	81
Expanding high-quality connectivity at affordable prices	84
Expanding high-quality connectivity and bridging existing divides	84
There is scope to increase competition in the communication market	89
Accelerating the digital transformation in the economy	90
Investing in digital technologies is key to spur productivity growth	91
Improving technology transfer and boosting support to the innovation ecosystem	96
Increasing availability and uptake of digital services	102
Improving skills and the labour market for the digital transformation	108
Higher education could foster digitalisation	113
Satisfying the demand for ICT specialists	116
References	126
